Architecture Blueprint

Architecture Design Process

Where to Start?

Gather and understand the requirements by interviewing stakeholders

- What are the **business concepts** we have for our application?
- Who are the business owners and sponsors for our use case and how do we organize the business contexts?
- How to ensure our teams are working independently to deliver business pace?
- What are the **NFRs**?
- What are **reusable components** or **system integrations** that we need?

NFRs Interview

Non functional requirements discovery interview: Sample Questions

NFR Question

Answer

Do we require any integration with external identity provider?

...

Is there a need fo generate PDFs or any other kind of reports?

...

Is it required to integrate with external systems? If yes, which systems? What are the authentication requirements?

...

Is there any need to integrate with external databases?

...

Are we foreseeing the need to use custom code?

...

What are the security related concerns?

...

Are we using a mobile app? If yes, do we have requirements for the mobile app that will translate into the usage of native plugins?

...

Example: Home Insurance App

- Quote generation, customizable coverage and simplified policy management
- Users can submit claims and track their progress.
- Have the Know Your Customer (KYC) to establish the user identity
- Integrate with SAP for financial management
- Consider risks to calculate the customer ratings
- Integrate with Guidewire for core insurance operations
- Connect customers, agents and underwriters

Disclose

Identifying the Concepts

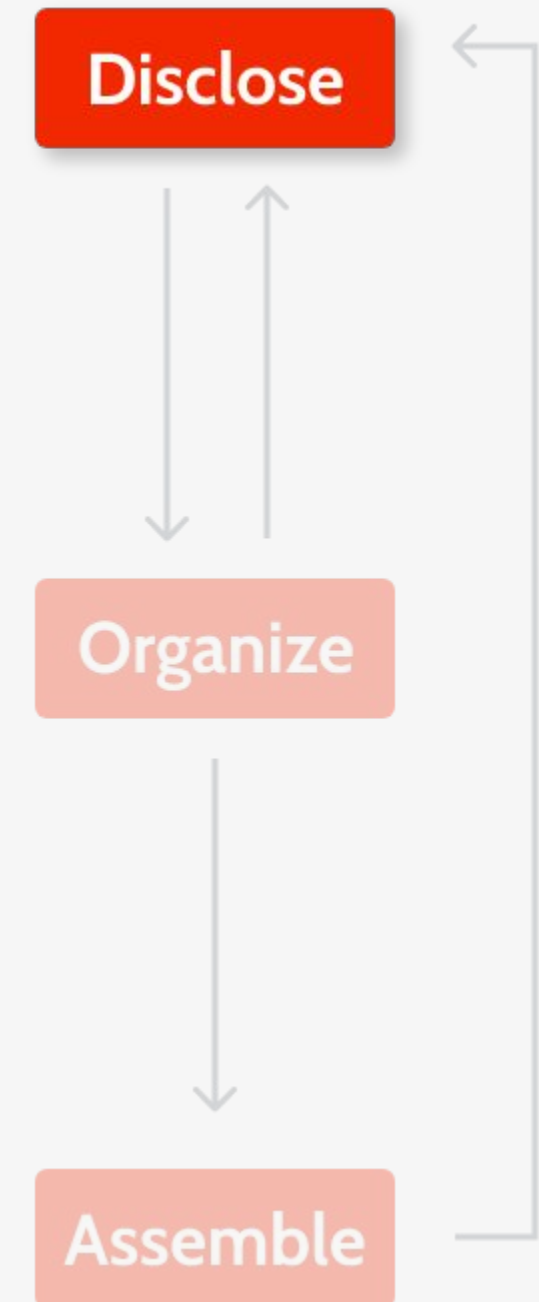

Identify the application concepts by covering the following

 Business requirements, processes, user stories, personas and roles

 Information architecture

 Non-functional requirements, integration technologies

 User experience expectations

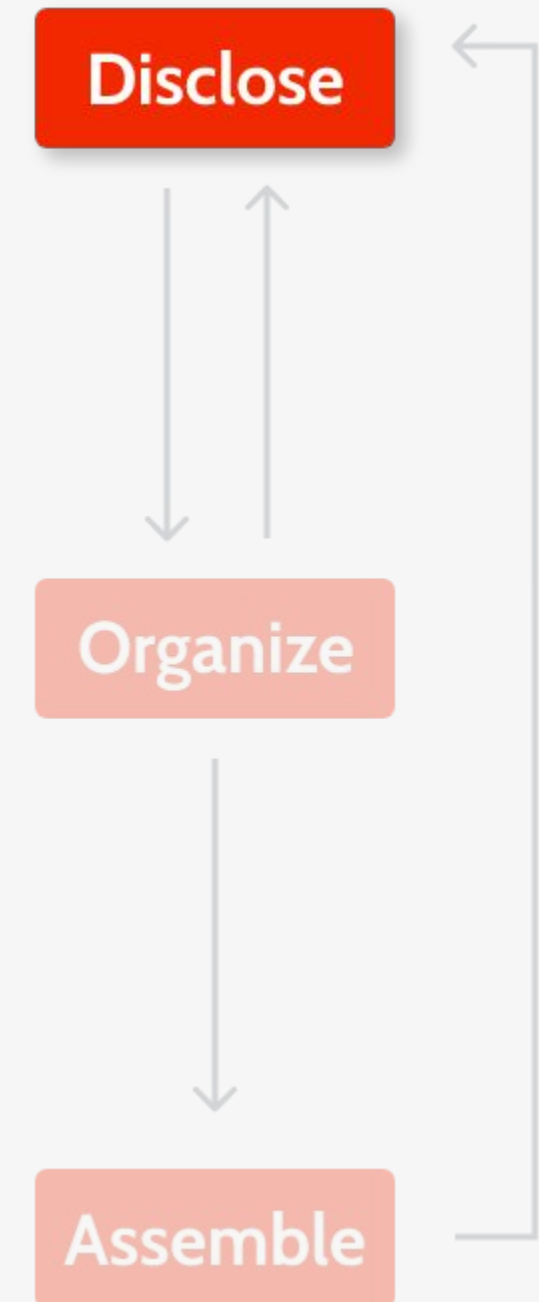

Application Concepts

- Personas
- Roles
- Business Concepts
- NFRs
- ...

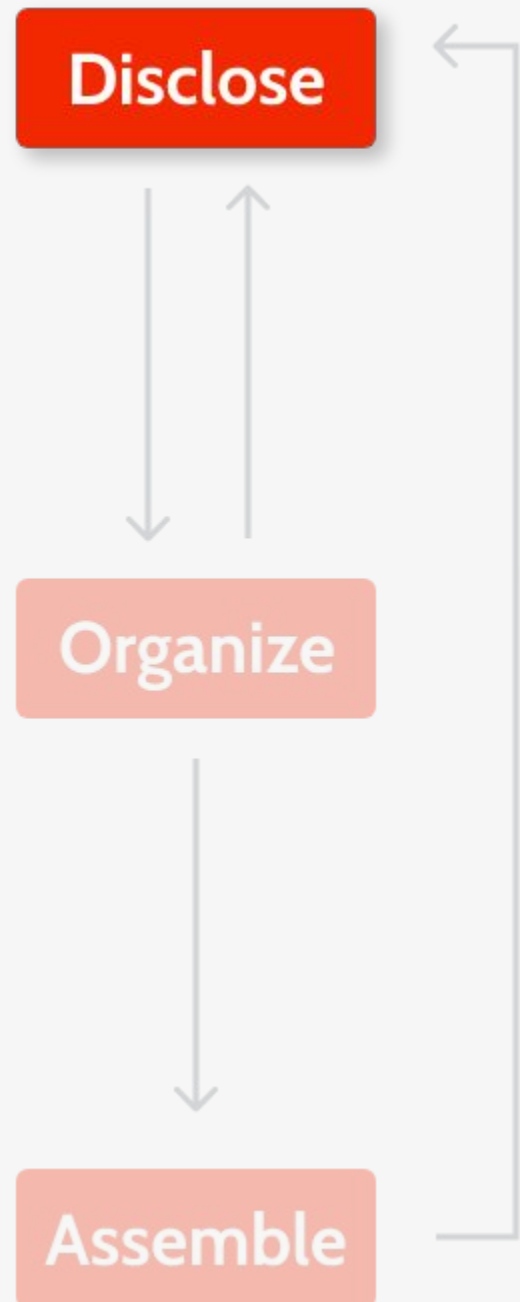

Application Concepts - Example

Concept	Type of Concept	Description
Customer	Persona/Role/Business	...
Agent/Broker	Persona/Role/Business	...
Claims	Business	...
Risk	Business	...
Payment	Business	...
Customer	Business	...
Quote	Business	...
SAP	Integration	...
Guidewire	Integration	...

Application Concepts - Example

Organize

Grouping Concepts

Identify your bounded contexts by grouping the concepts based on following

Domain expert boundaries

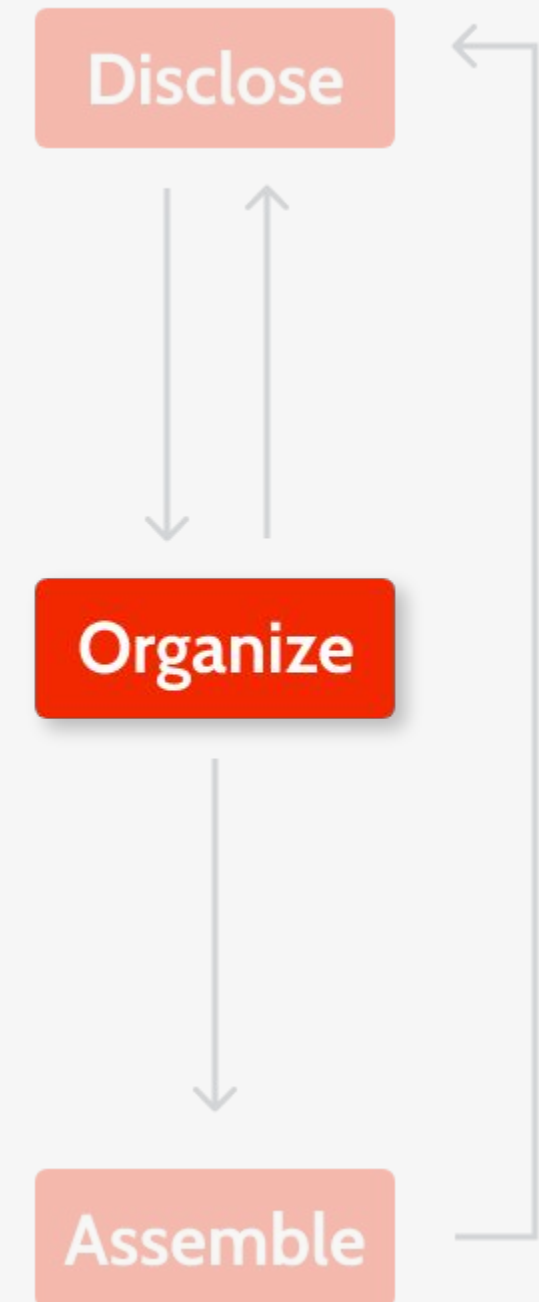

Business process steps, data flow and ownership

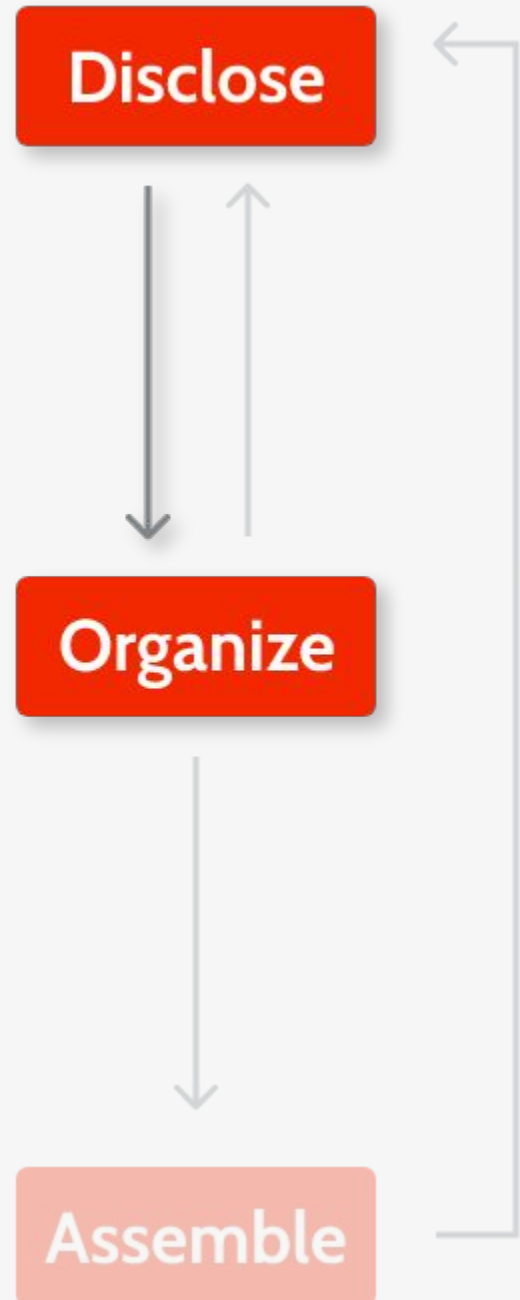

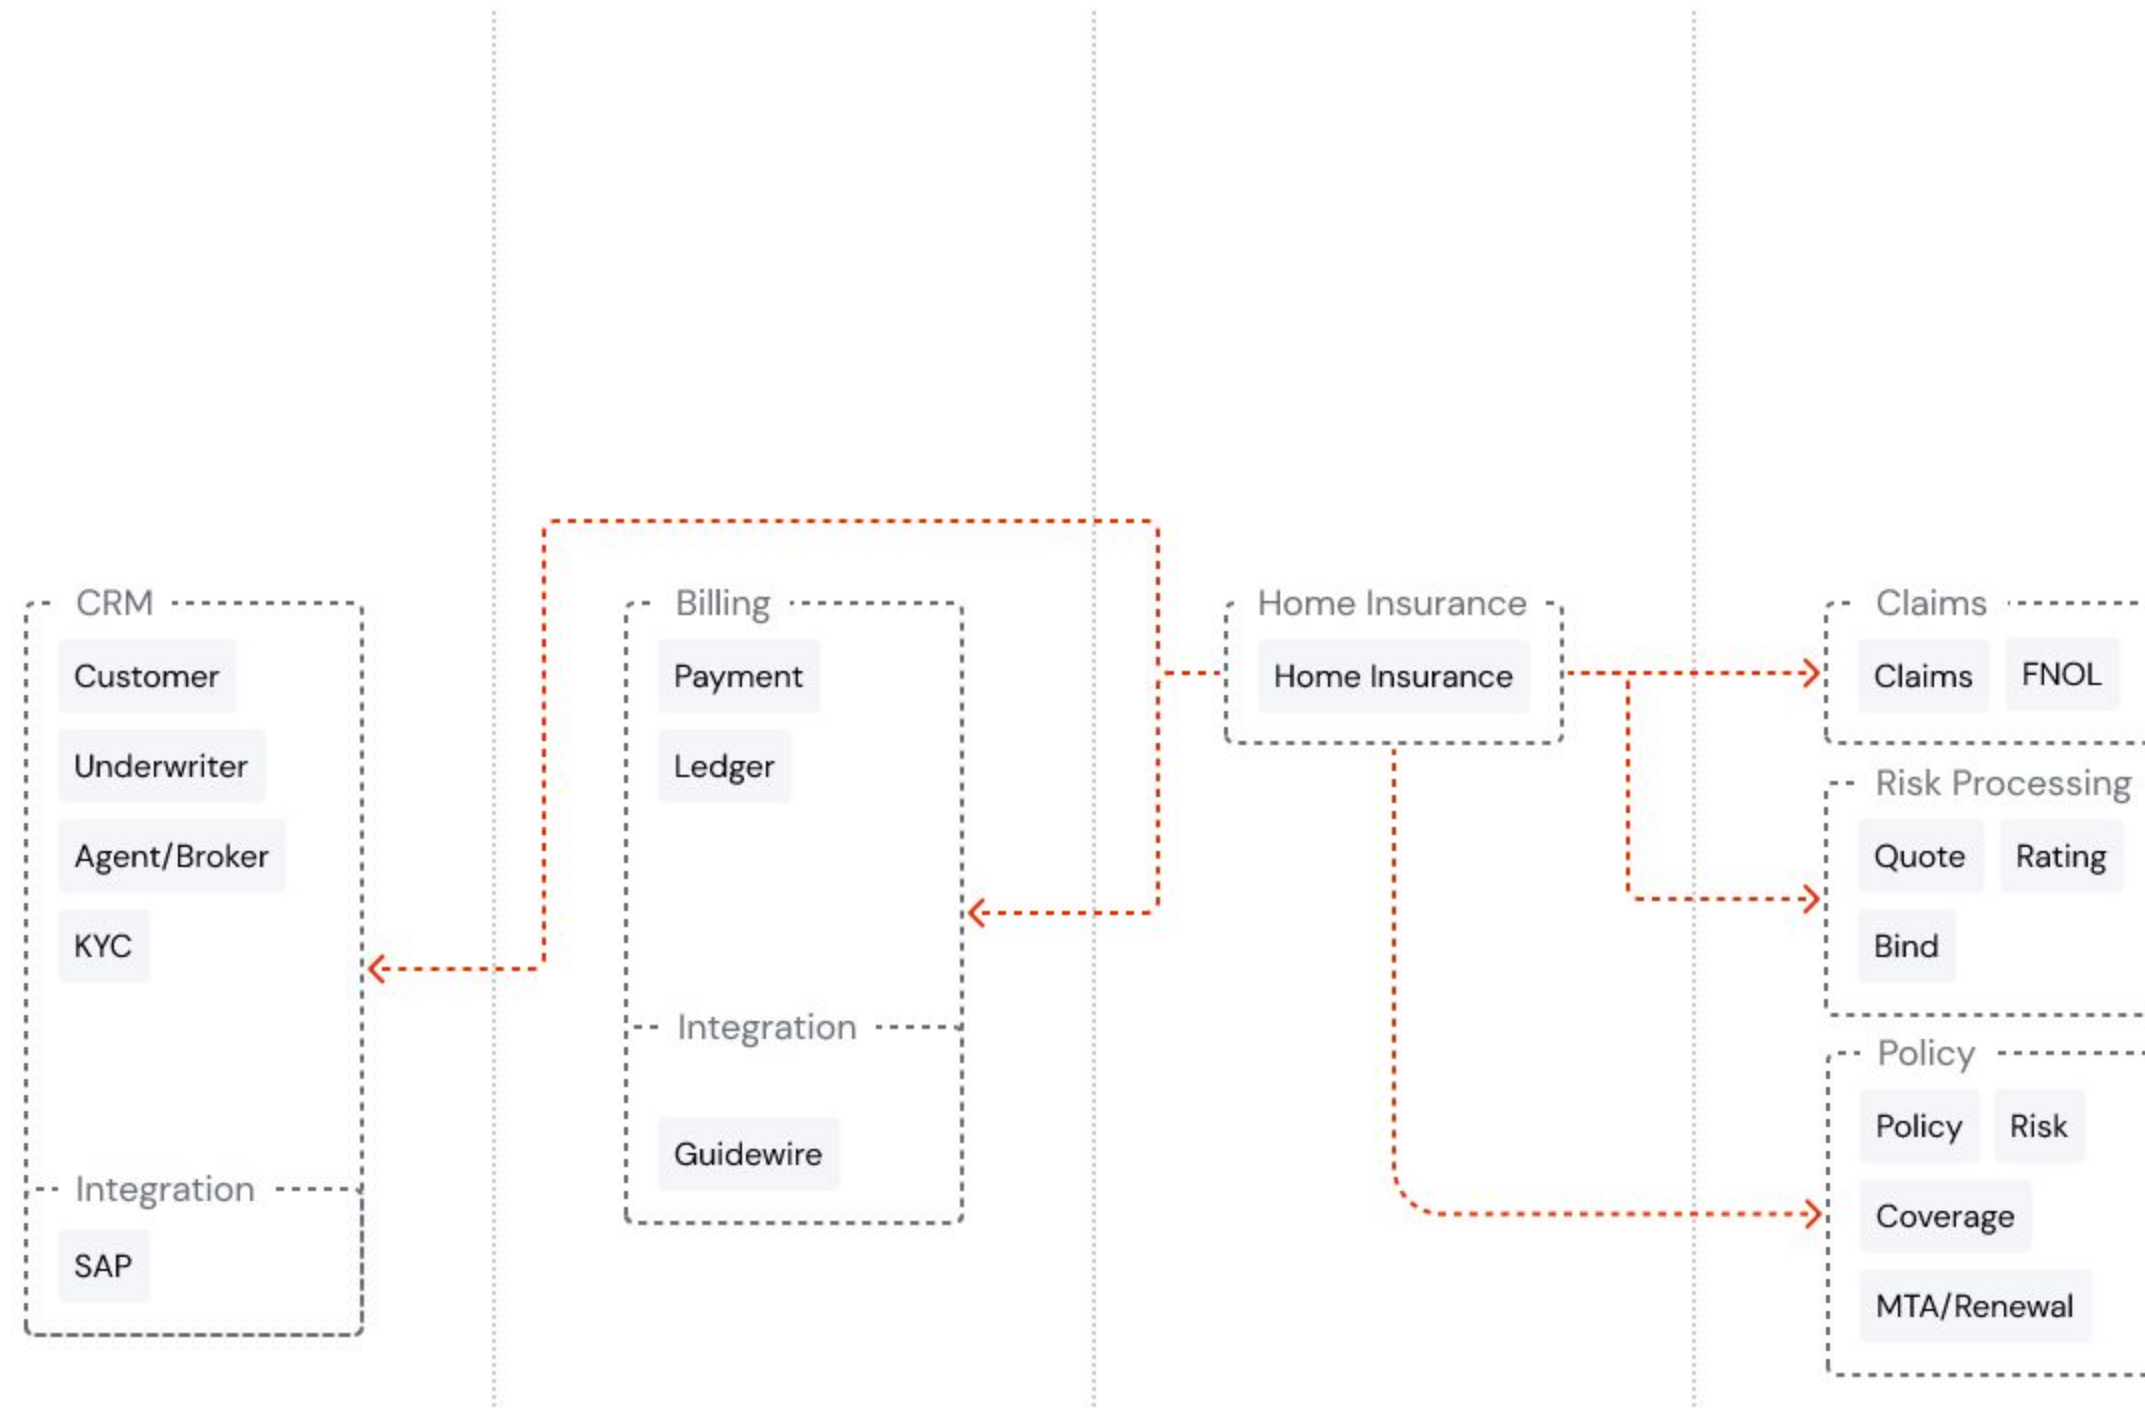

Dependency clustering, concepts cohesion

Ubiquitous language

Organize

Assemble

Assemble

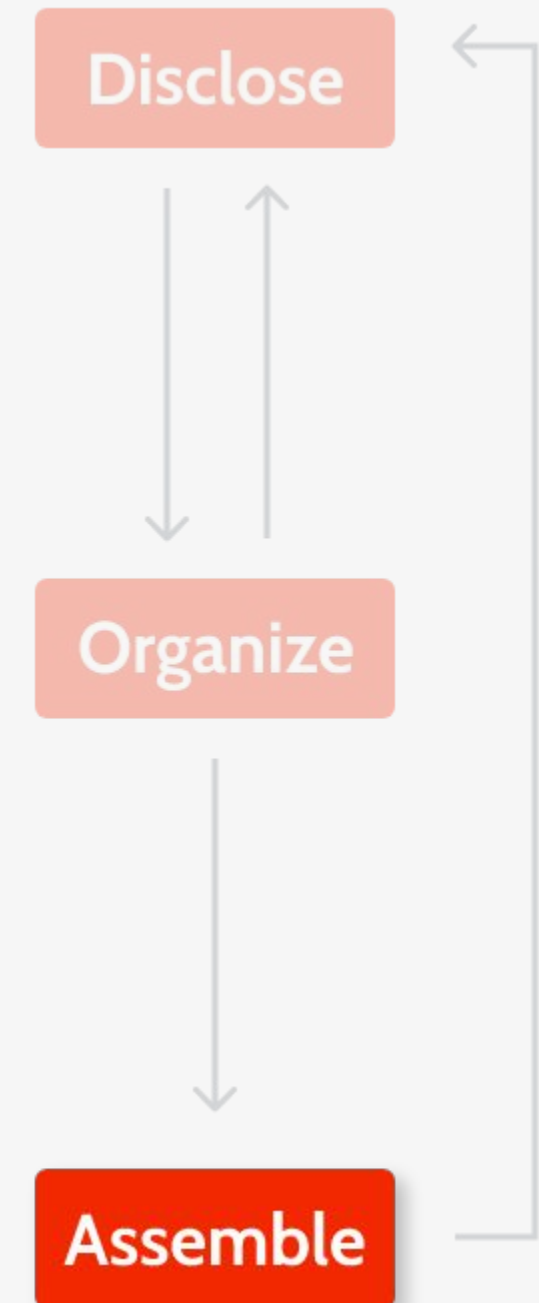

Aim for teams' independence, autonomy in release cycles with a clear ownership and manageable complexity

 Understand your organization (teams, business owners and sponsors)

 Establish clear ownership

 Release cycles independence (developing, testing, deploying)

 Reduce complexity

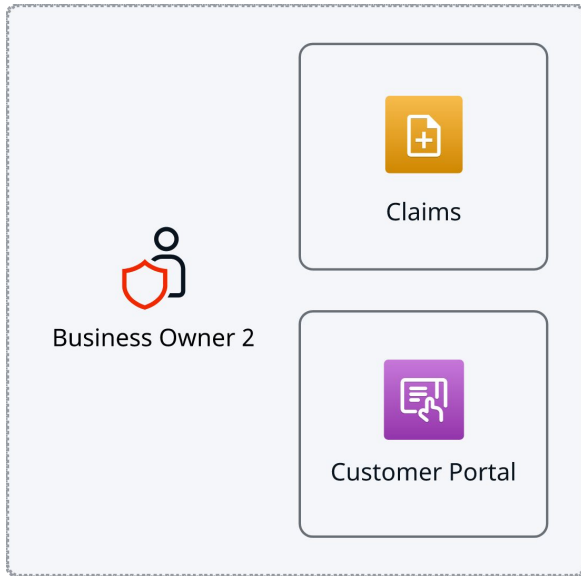

Business Owners

Prevent mixing business owners to ensure clear ownership

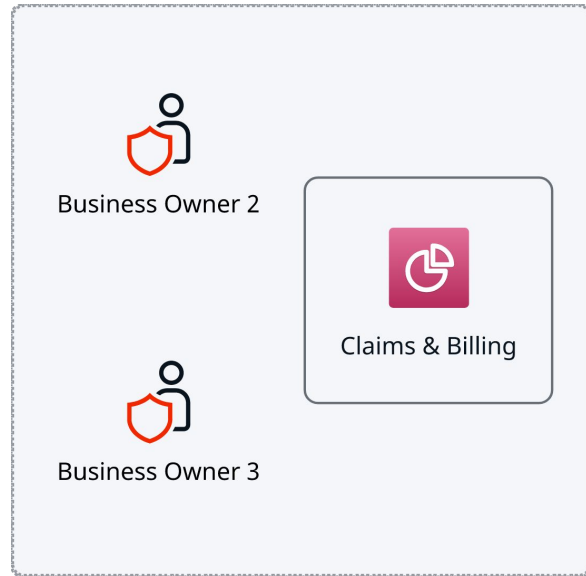

Scenario 1 ✓

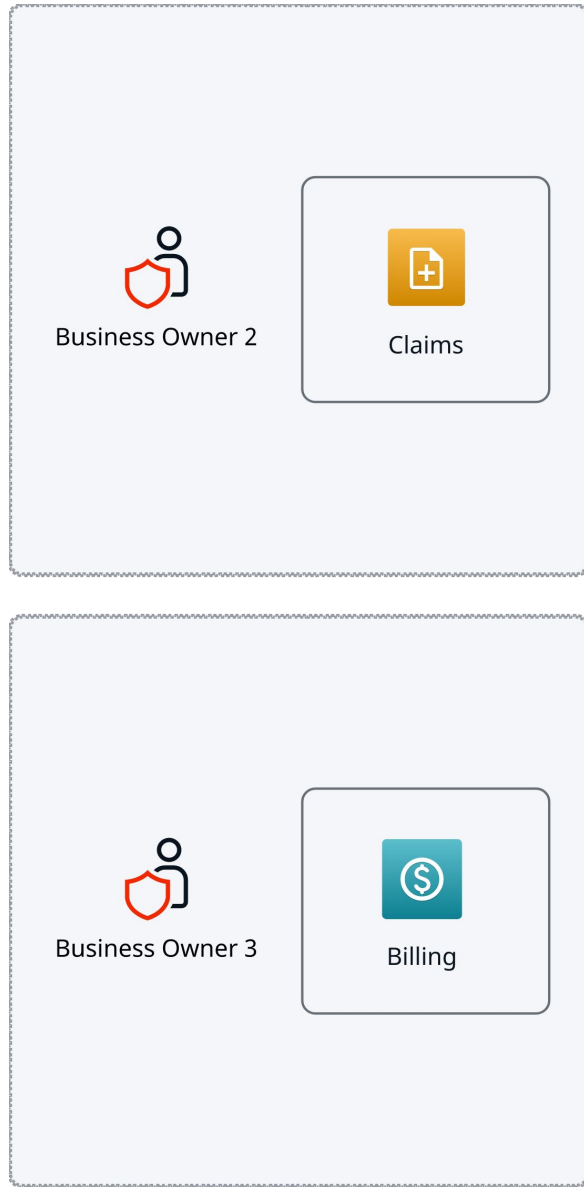

Scenario 2 ✓

Scenario 3 ⚠

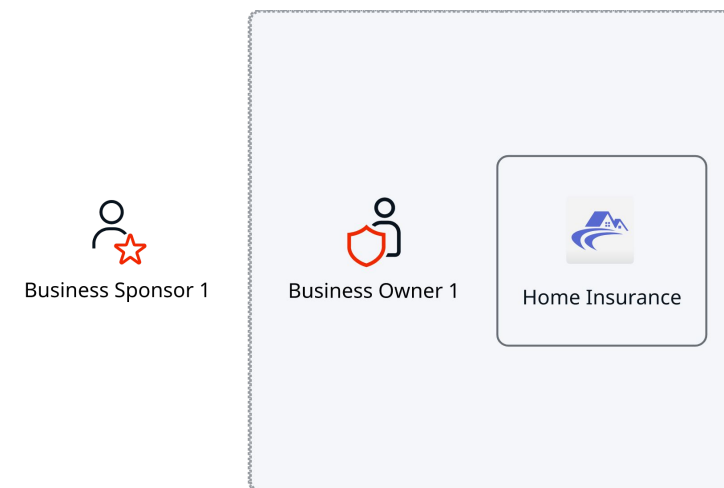

Scenario 4 ✓

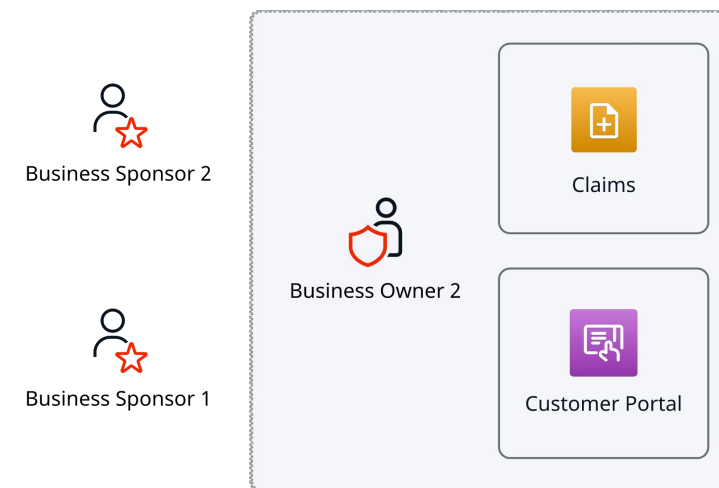

Business Sponsors

Prevent mixing business sponsors with different paces
to ensure release cycles independence

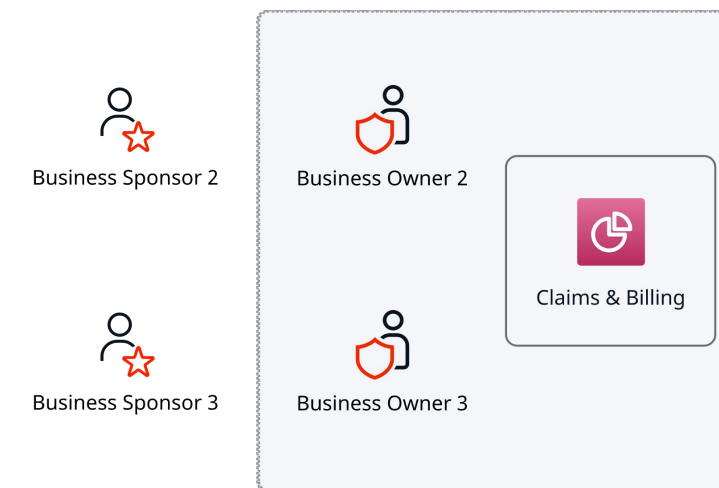

Scenario 1 ✓

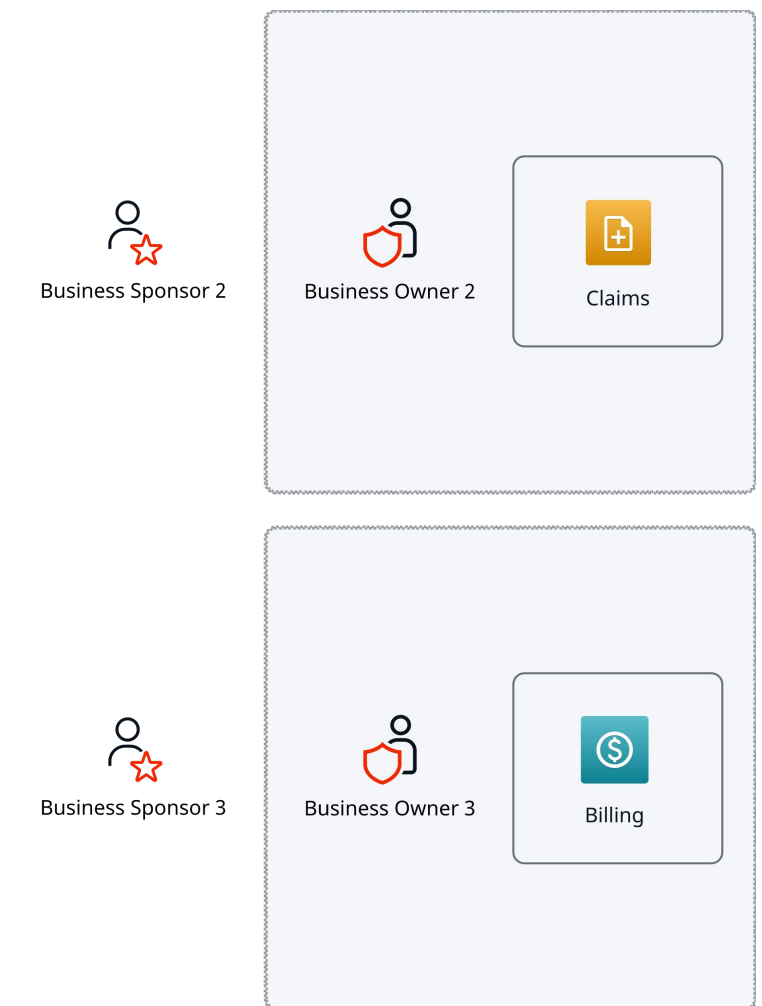

Scenario 2 ✓

Scenario 3 ⚠

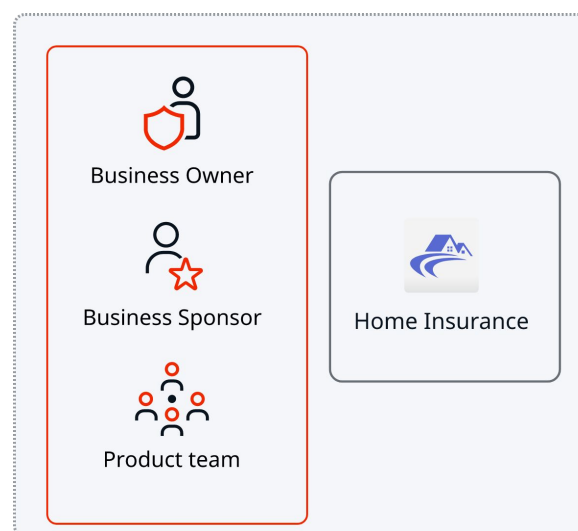

Scenario 4 ✓

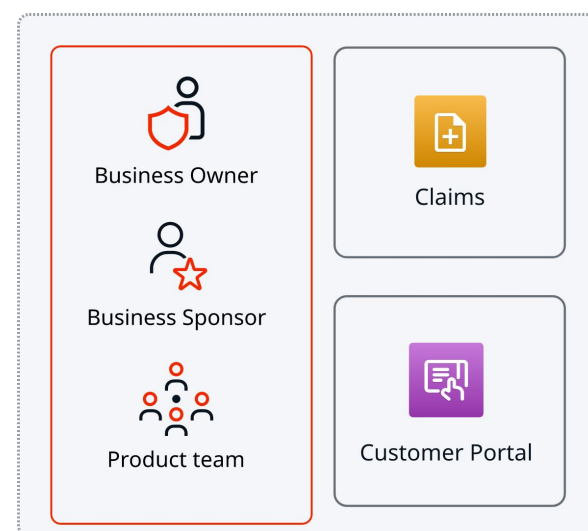

Product Teams

One Application should not have more than one owner team

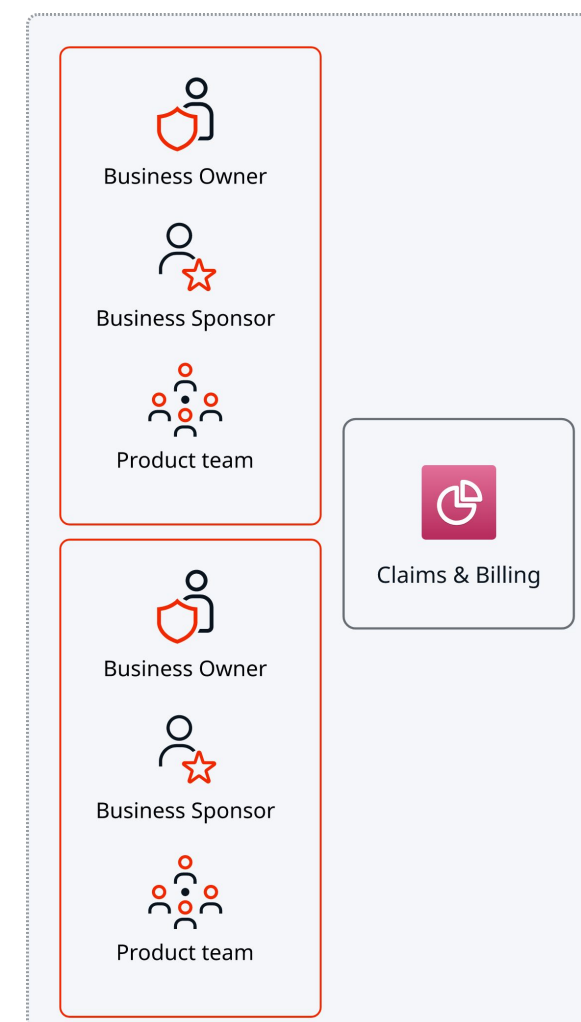

Scenario 1 ✓

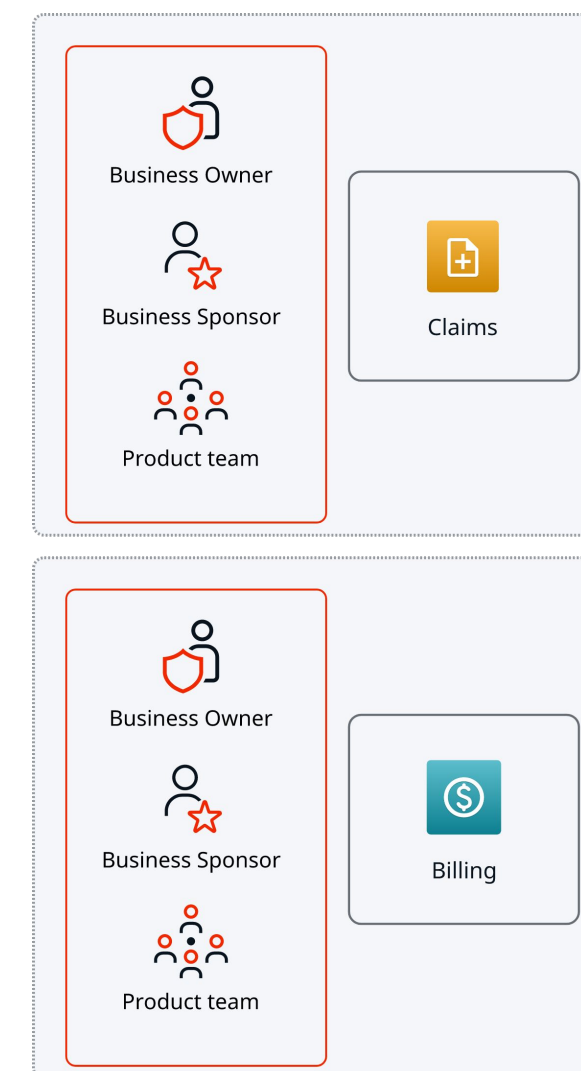

Scenario 2 ✓

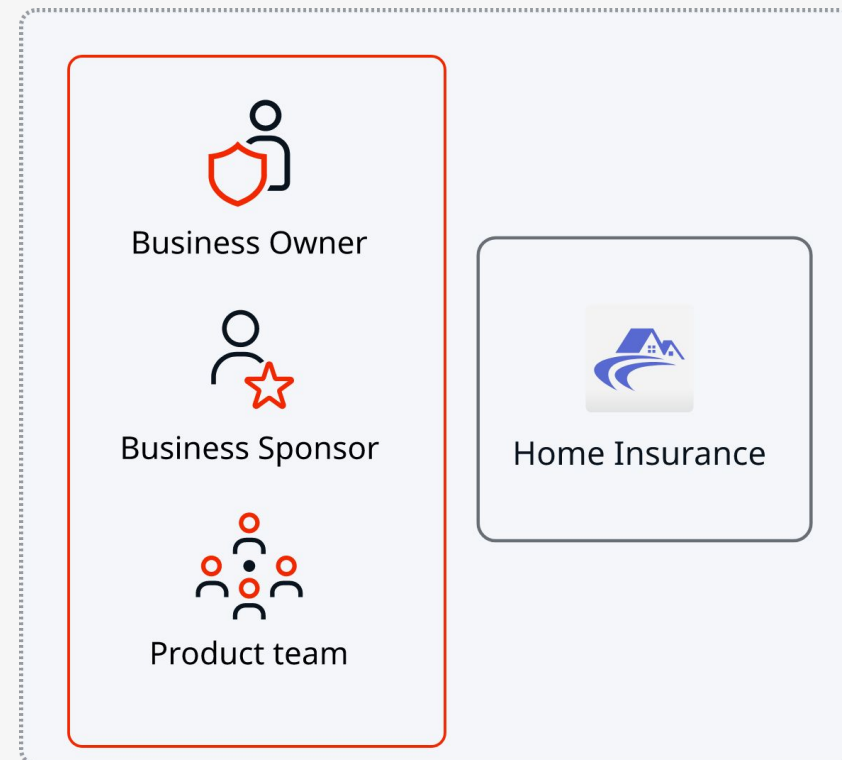

Scenario 3 ⚠

Scenario 4 ✓

Simplified Approach

Scenario

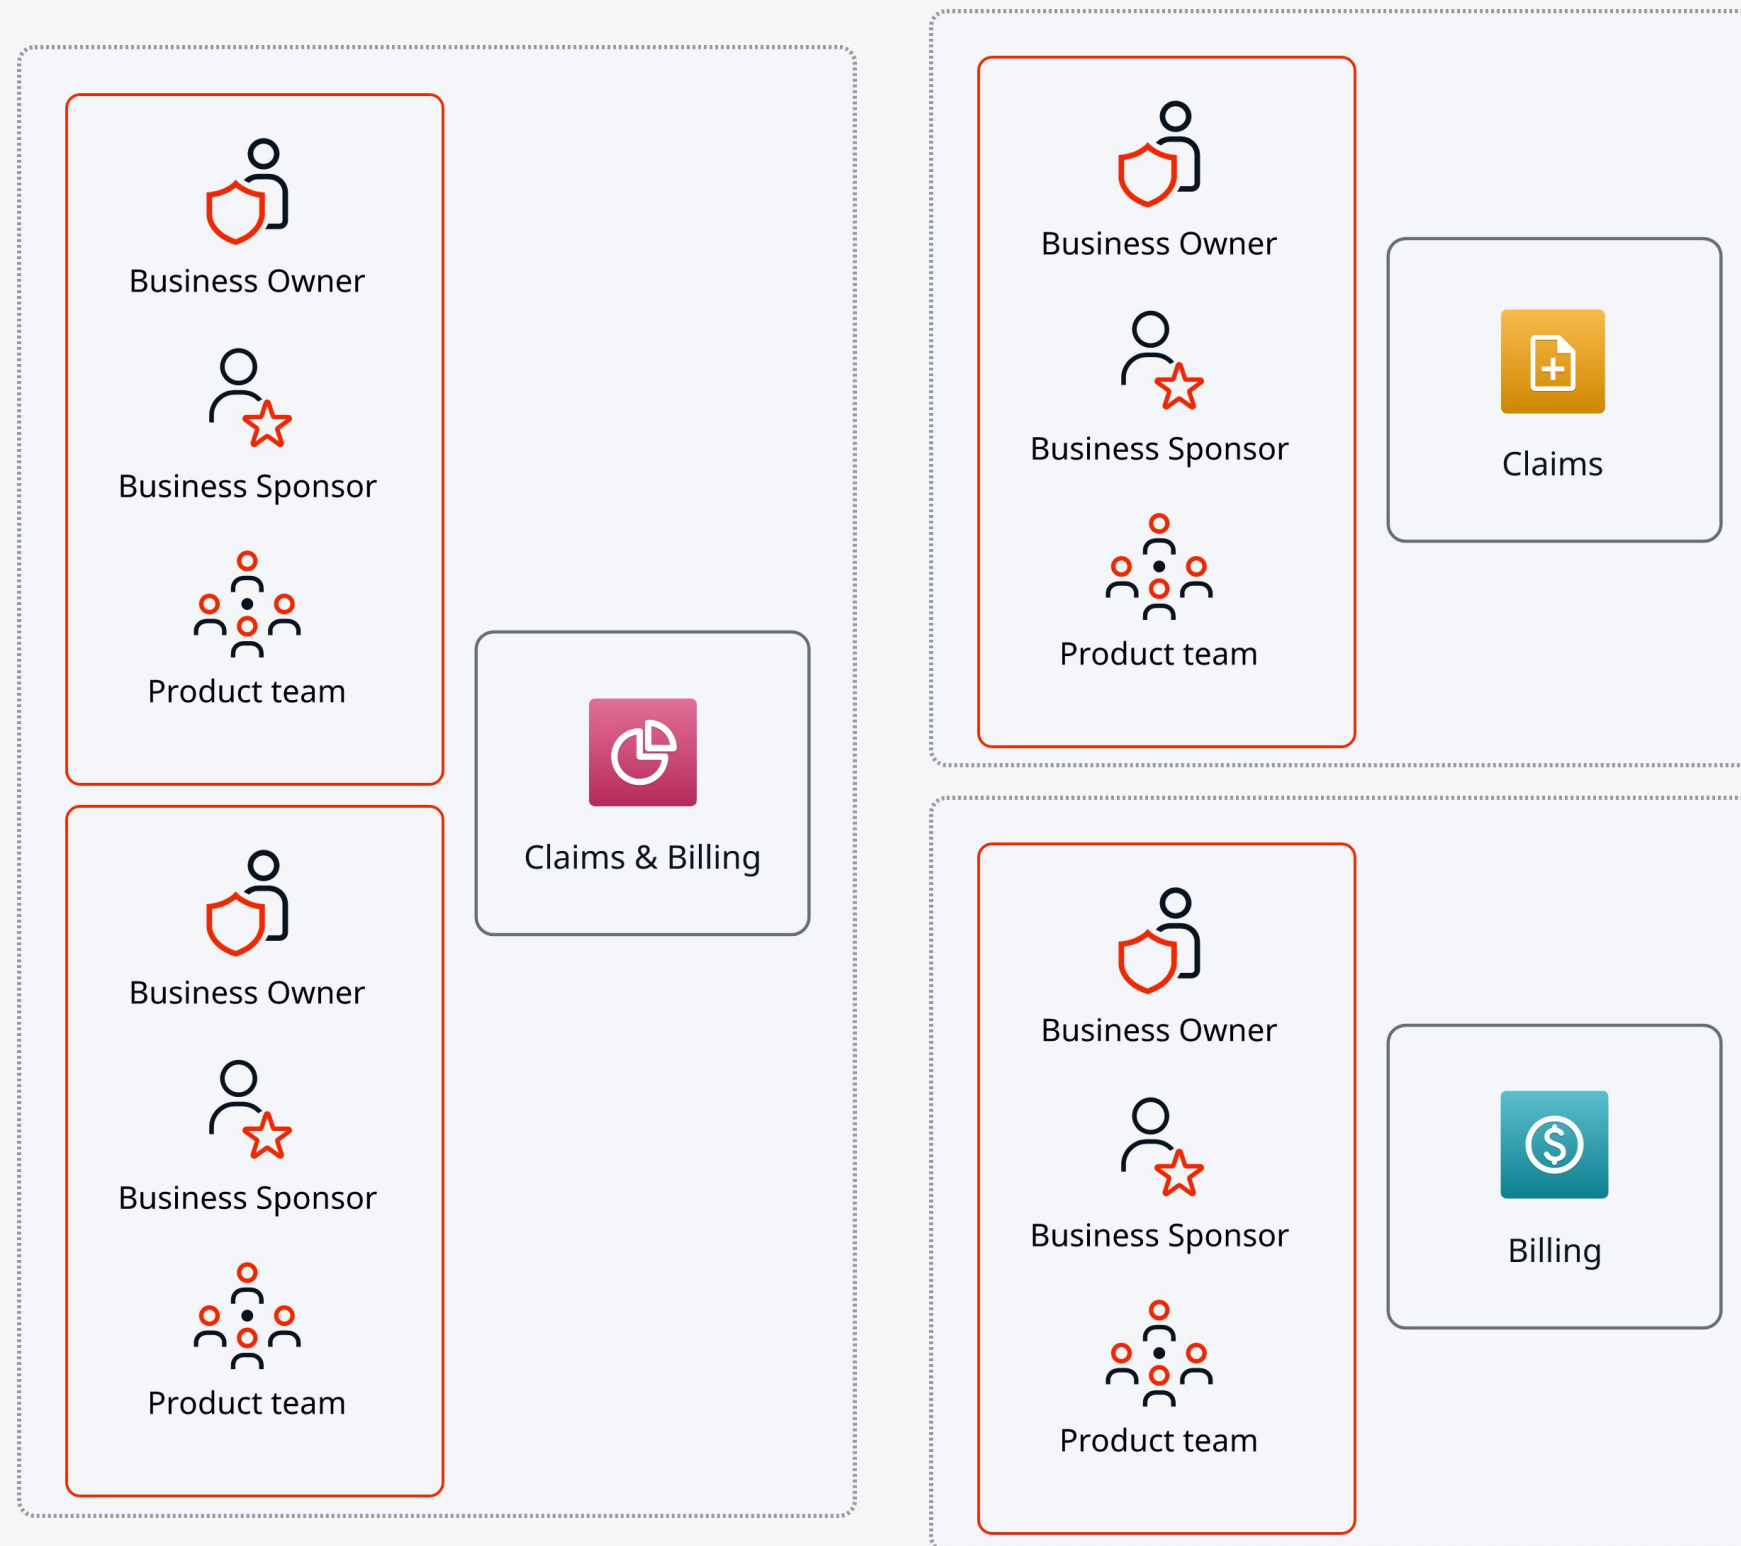

- ✓ One Business Sponsor
- ✓ One Business Owner
- ✓ One Product Team

Start with Simplified Approach

- ✓ One Application
- ✓ All business contexts inside
- ✓ Low development effort
- ✓ Low architecture effort

Distributed Approach

Scenario

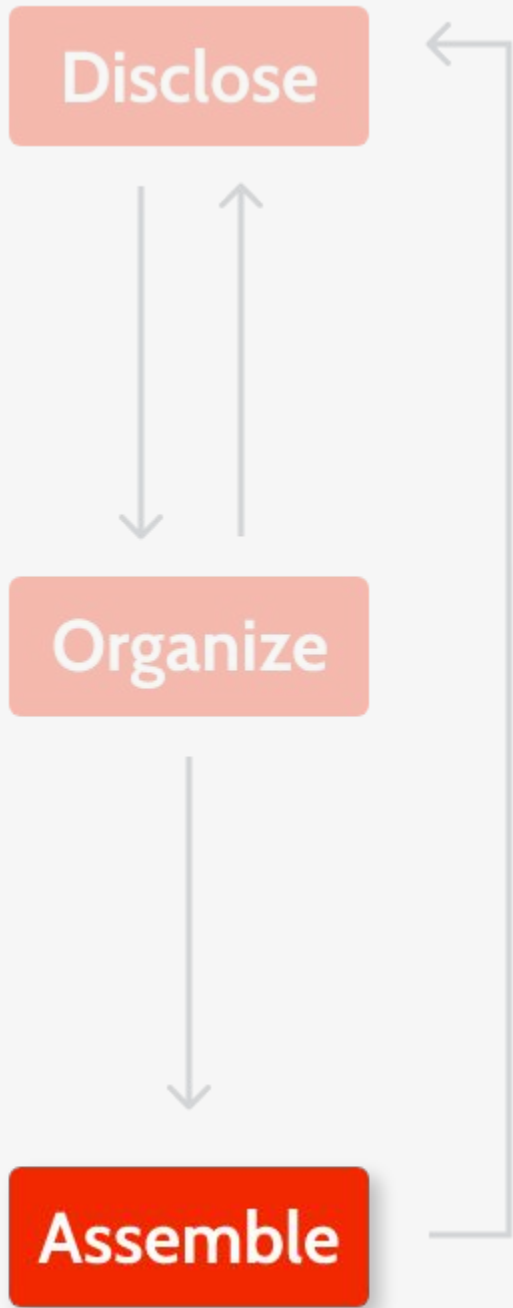

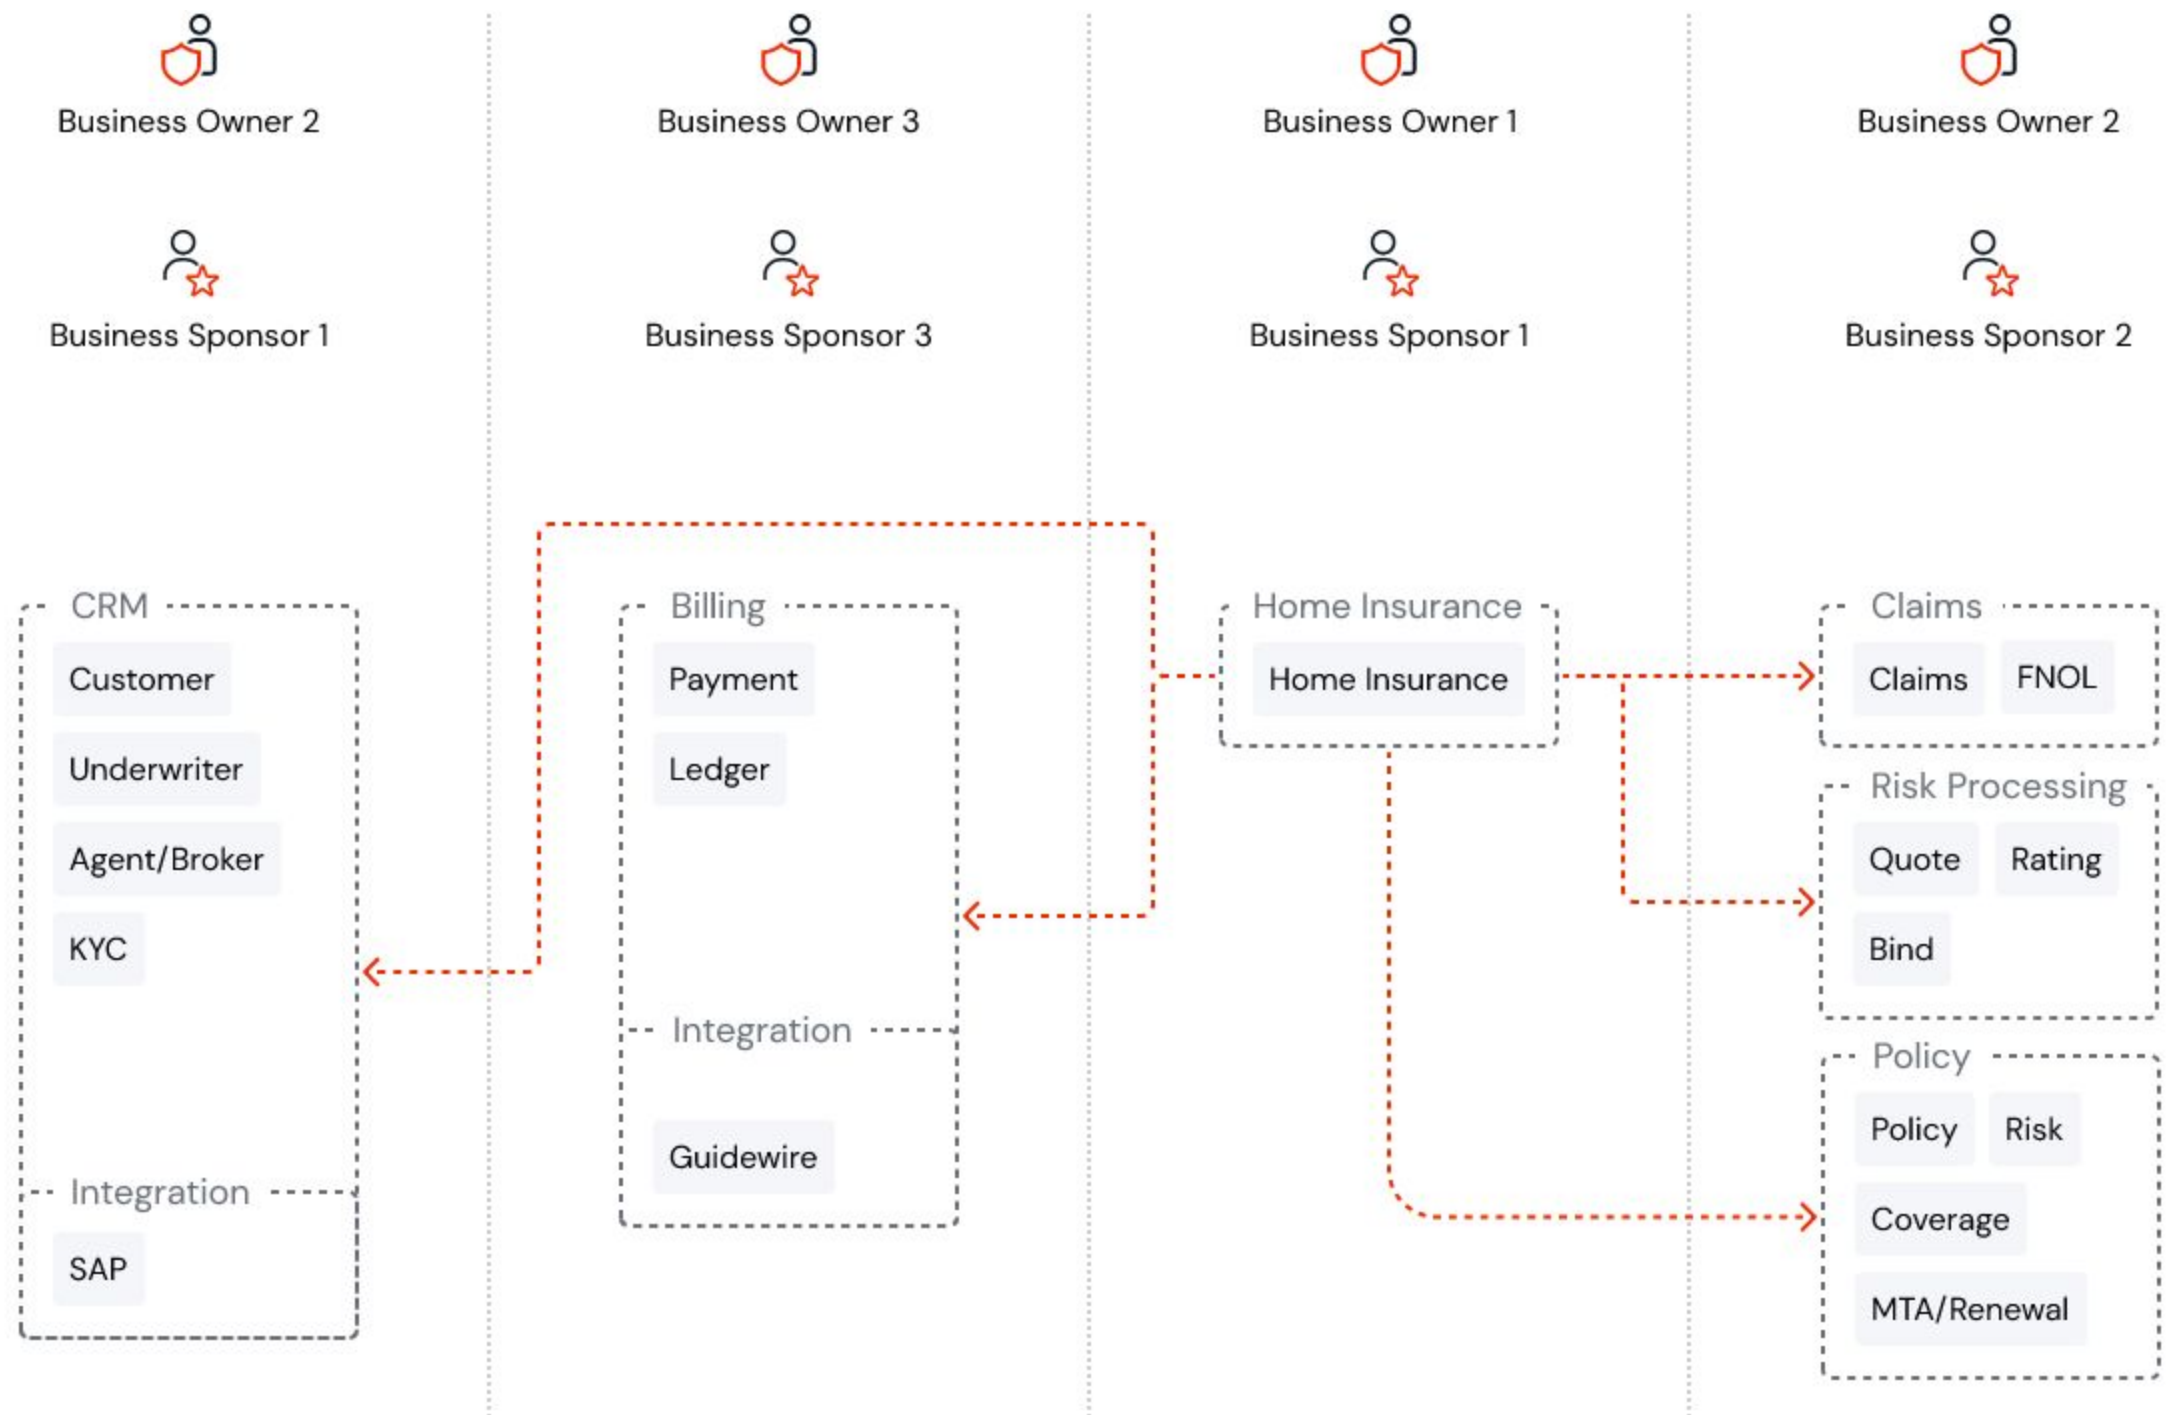

- ✓ Two Business Sponsors
- ✓ Two Business Owners
- ✓ Two Product Teams

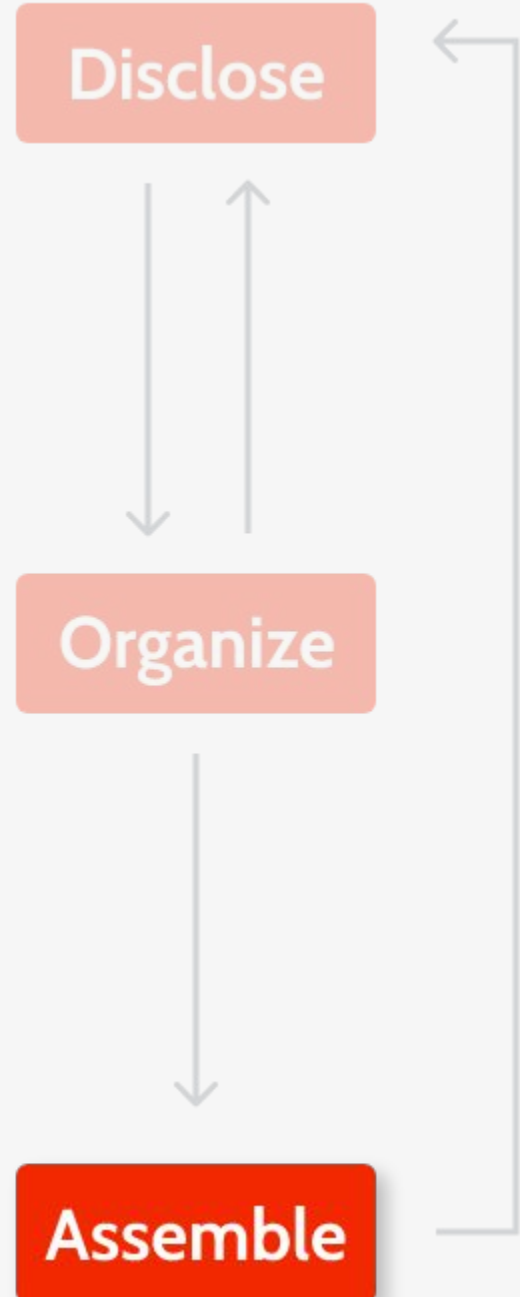

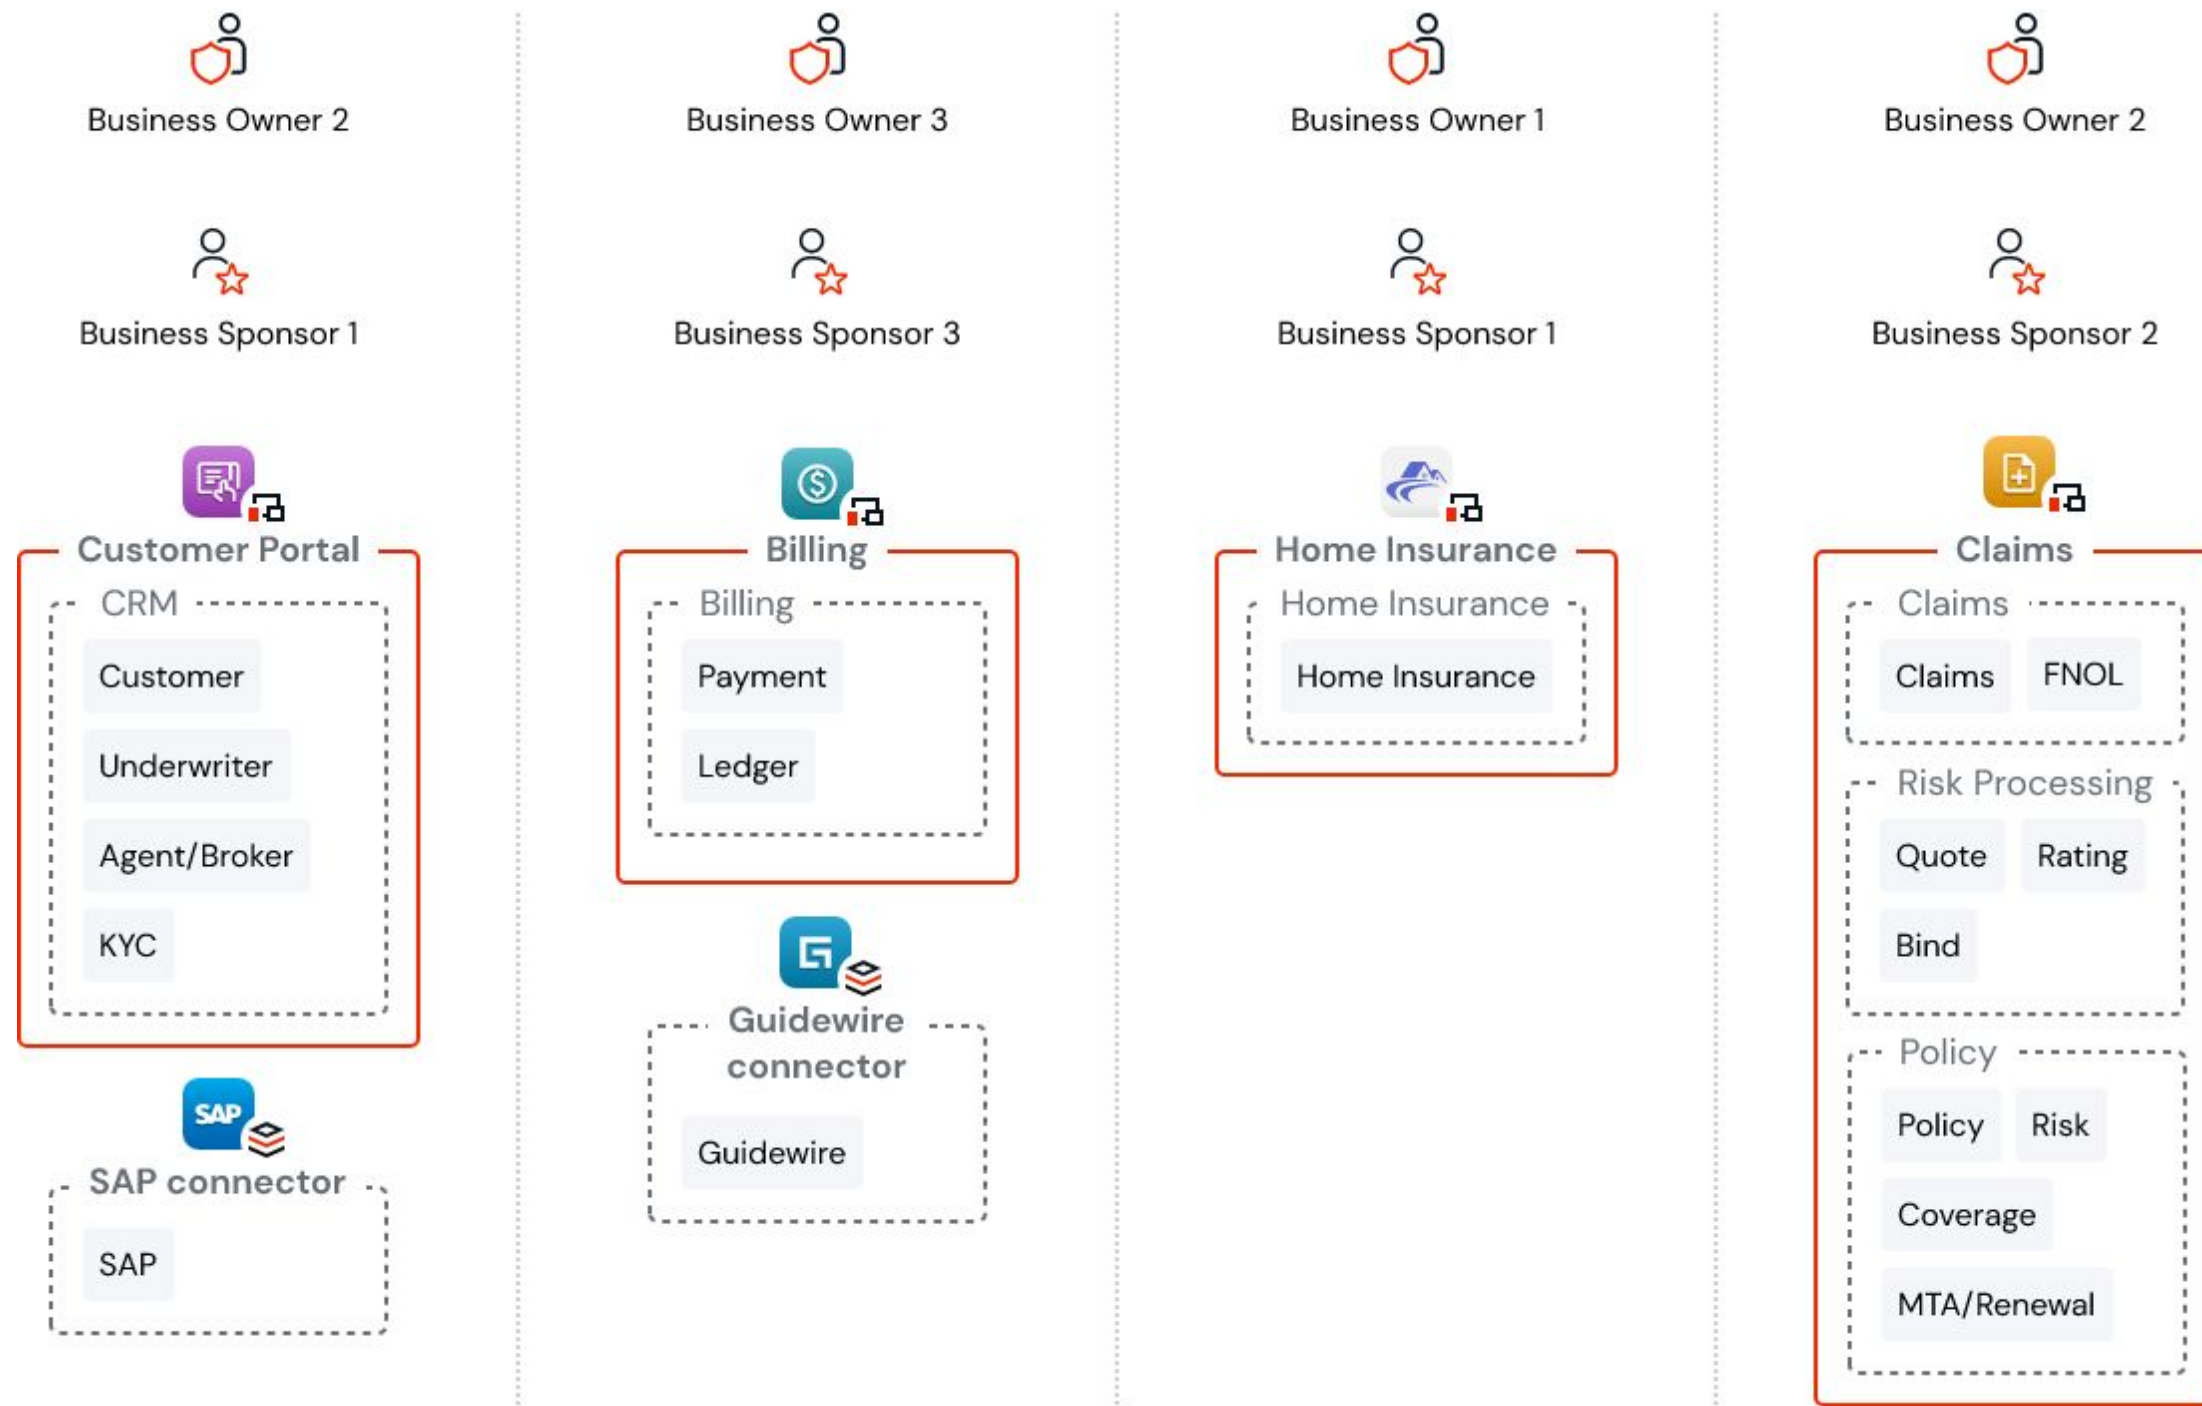

Distributed Approach

- ✓ Split Bounded Contexts into Applications as needed, following the Assemble criteria
 - ✓ High Teams Independence
 - ✓ Clear Ownership

Assemble
