

Naming Best Practices

Apps
Libraries
Elements

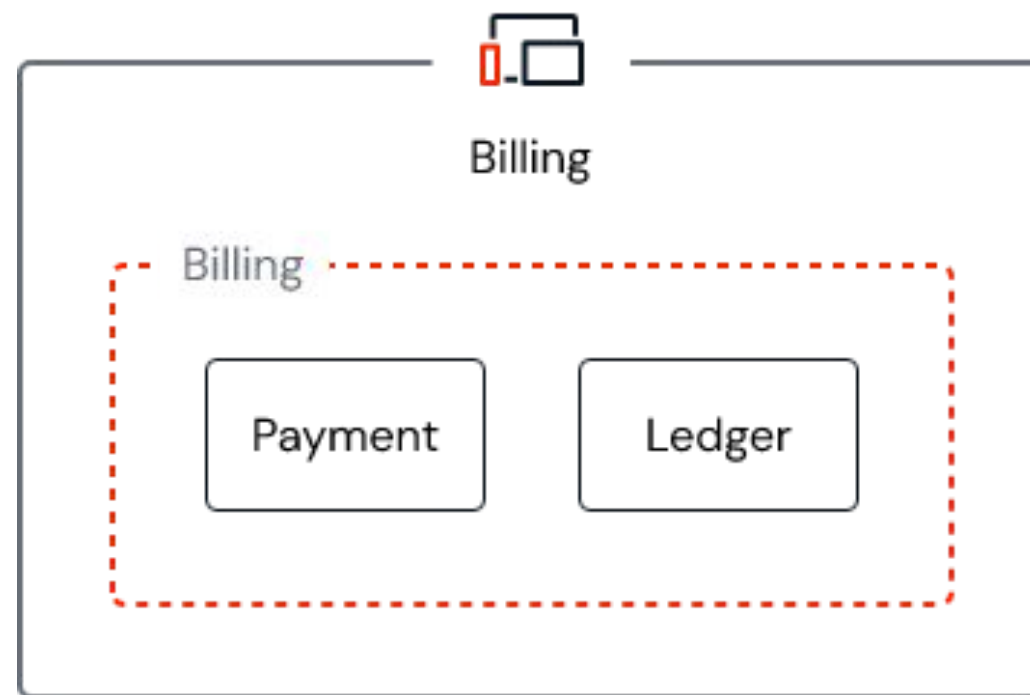

App and Libraries Naming

Using clear naming for Apps and Libs enables a better shared understanding of the architecture

App and Libraries Naming

Using clear naming for Apps and Libs enables a better shared understanding of the architecture

Apps

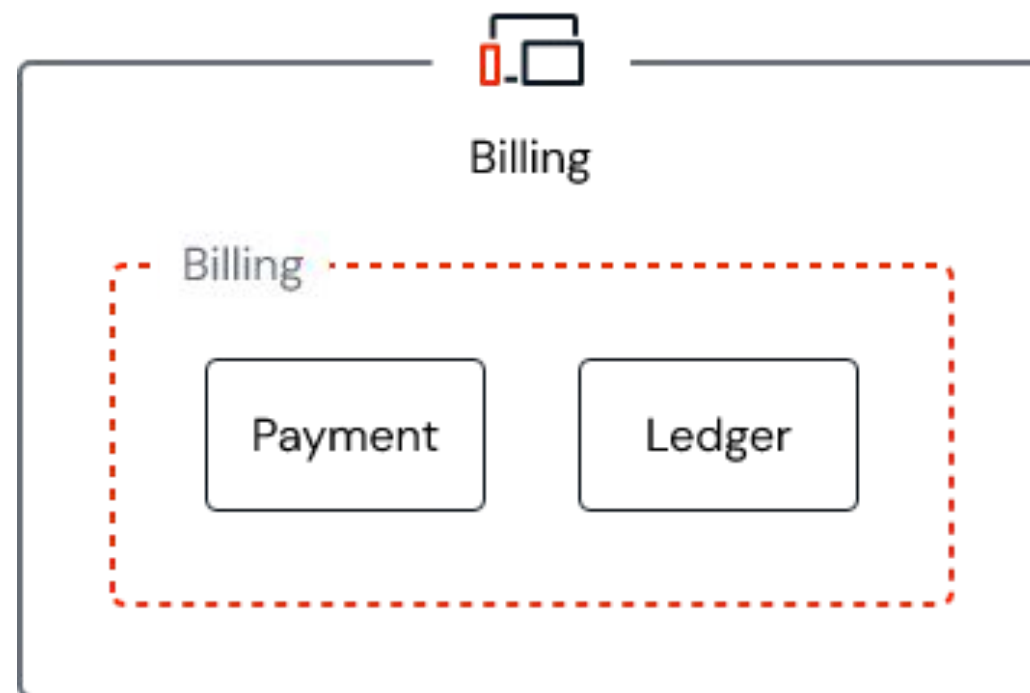

- App name should follow the **bounded context name**
- When there is more than one bounded context the app name should follow **business terms**
- App name will be used as **part of the URL**

App and Libraries Naming

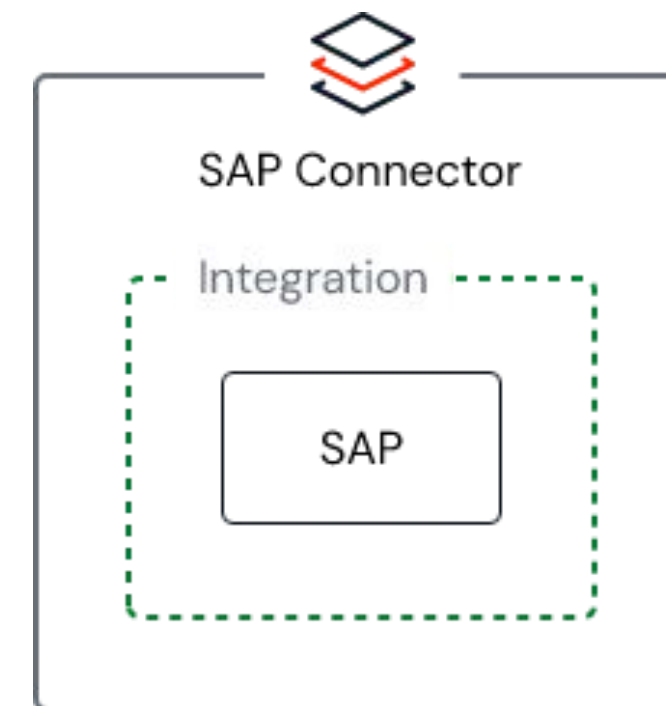

Using clear naming for Apps and Libs enables a better shared understanding of the architecture

Apps

- App name should follow the **bounded context name**
- When there is more than one bounded context the app name should follow **business terms**
- App name will be used as **part of the URL**

Libraries

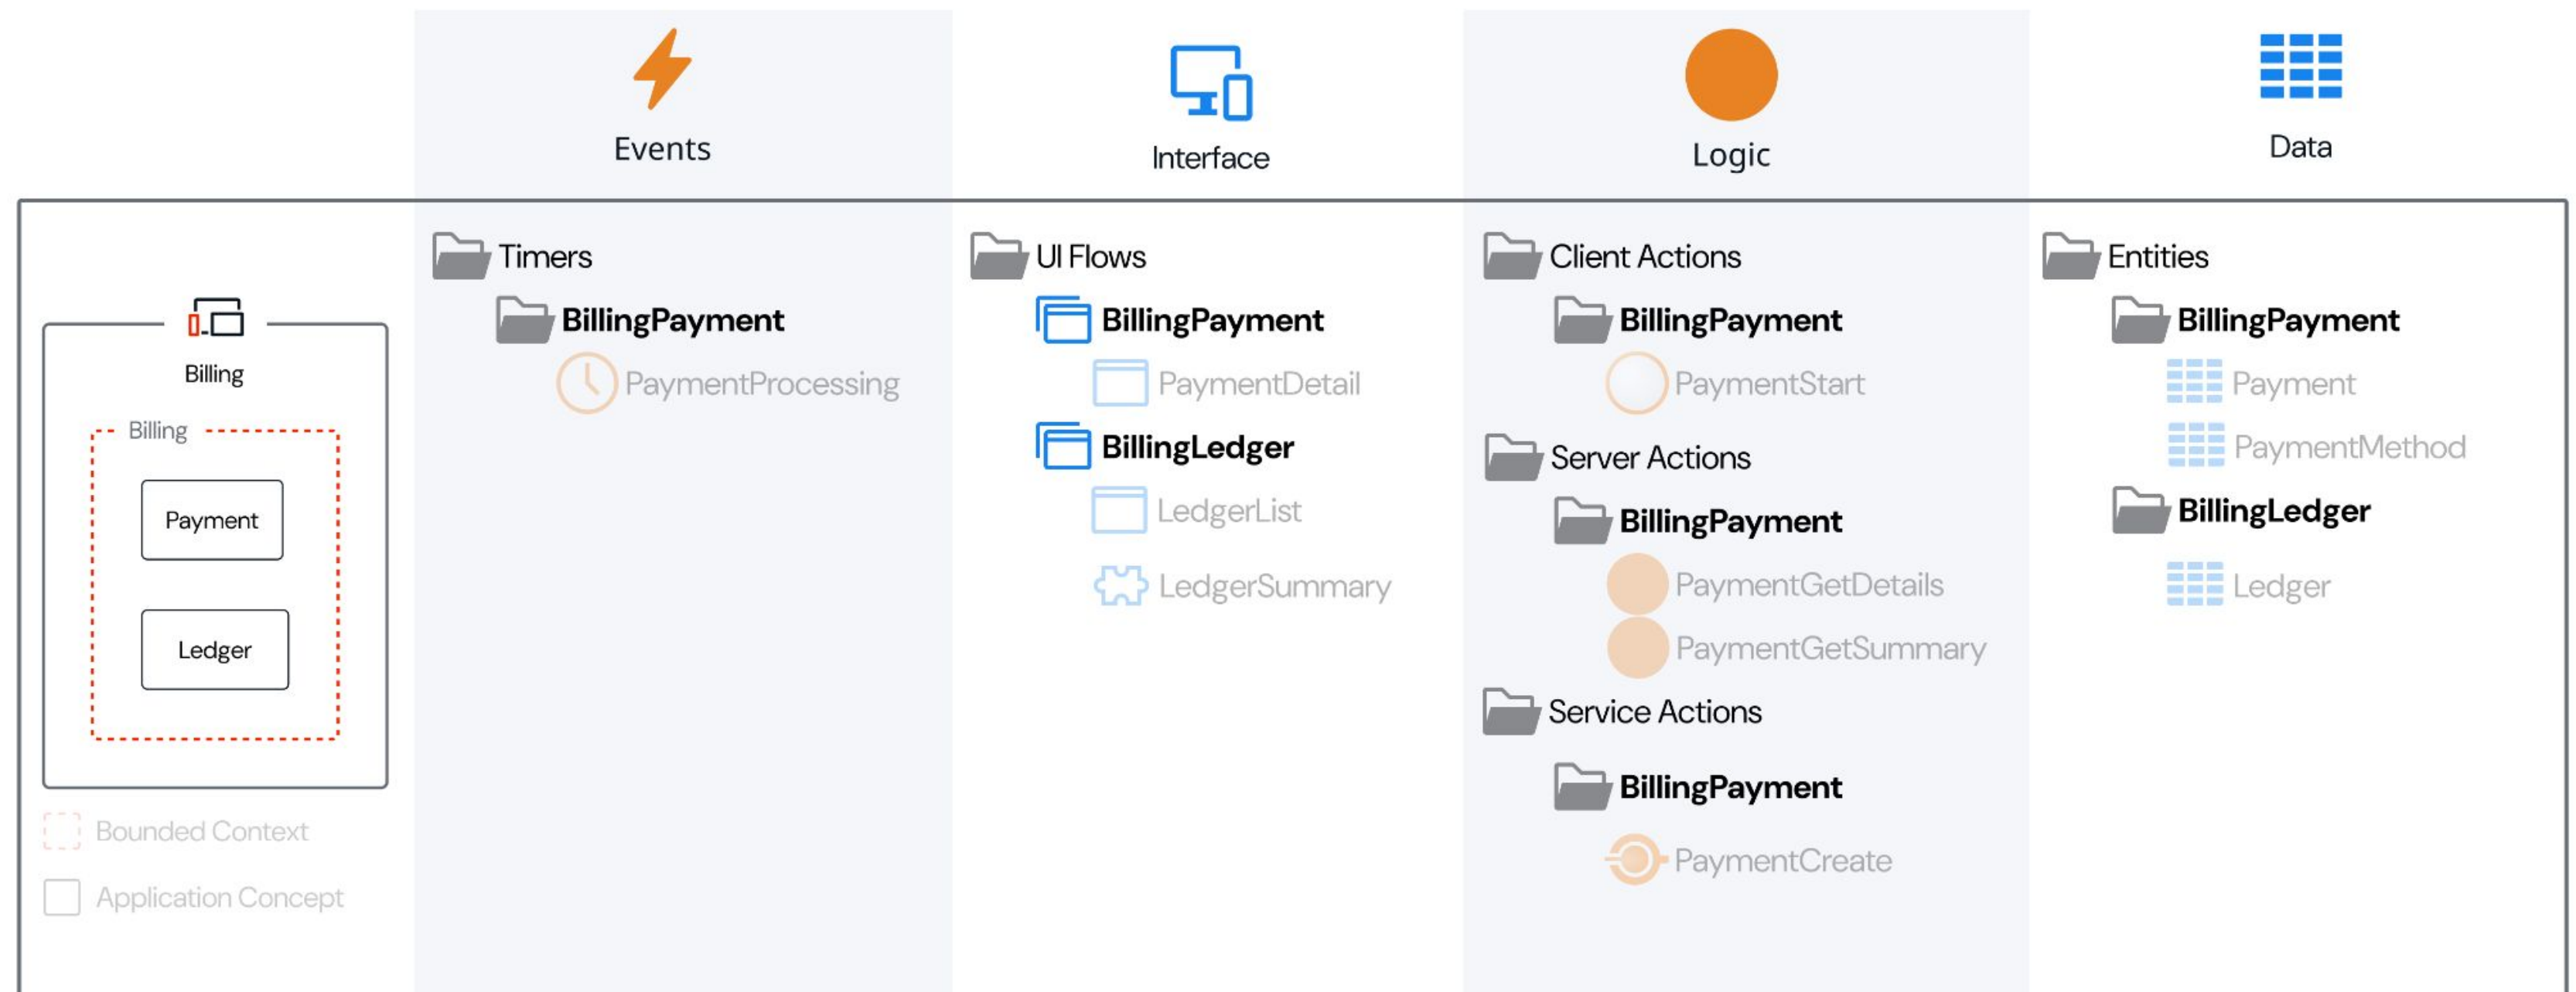

- Libraries name **do not impact** any **URL** or endpoint
- Use a classification that helps **identify its purpose** (e.g. SAP Connector, Mobile Theme)

Naming Elements

Having a clear naming that reflects the bounded context and app concept helps understand the code easily, lowering the cognitive load and increasing the code maintainability

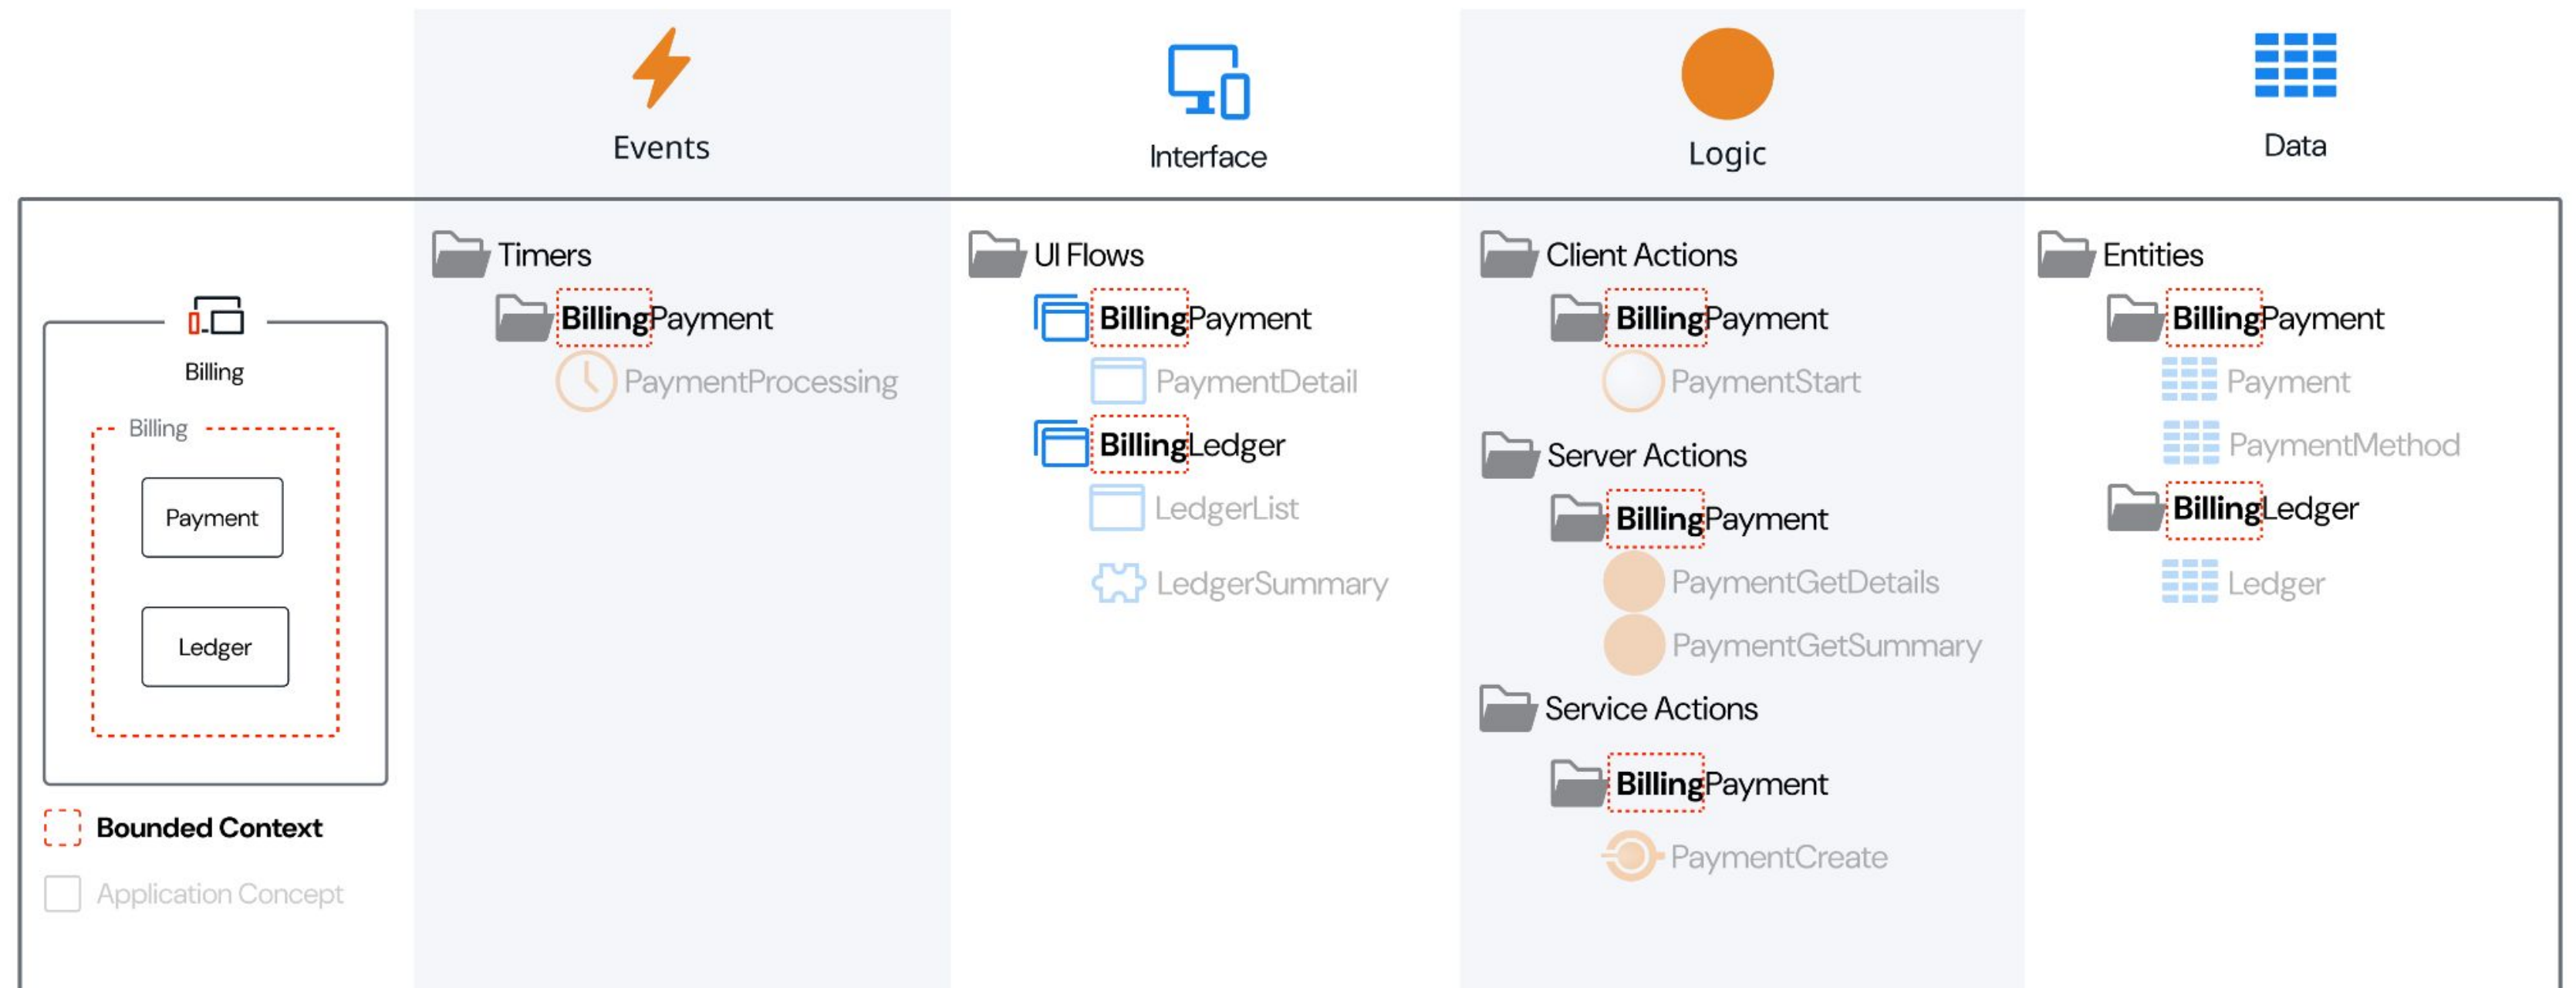

Naming Elements

Having a clear naming that reflects the bounded context and app concept helps understand the code easily, lowering the cognitive load and increasing the code maintainability
