

Sharing Data Patterns

Sharing Reference Data

Sharing Business Data

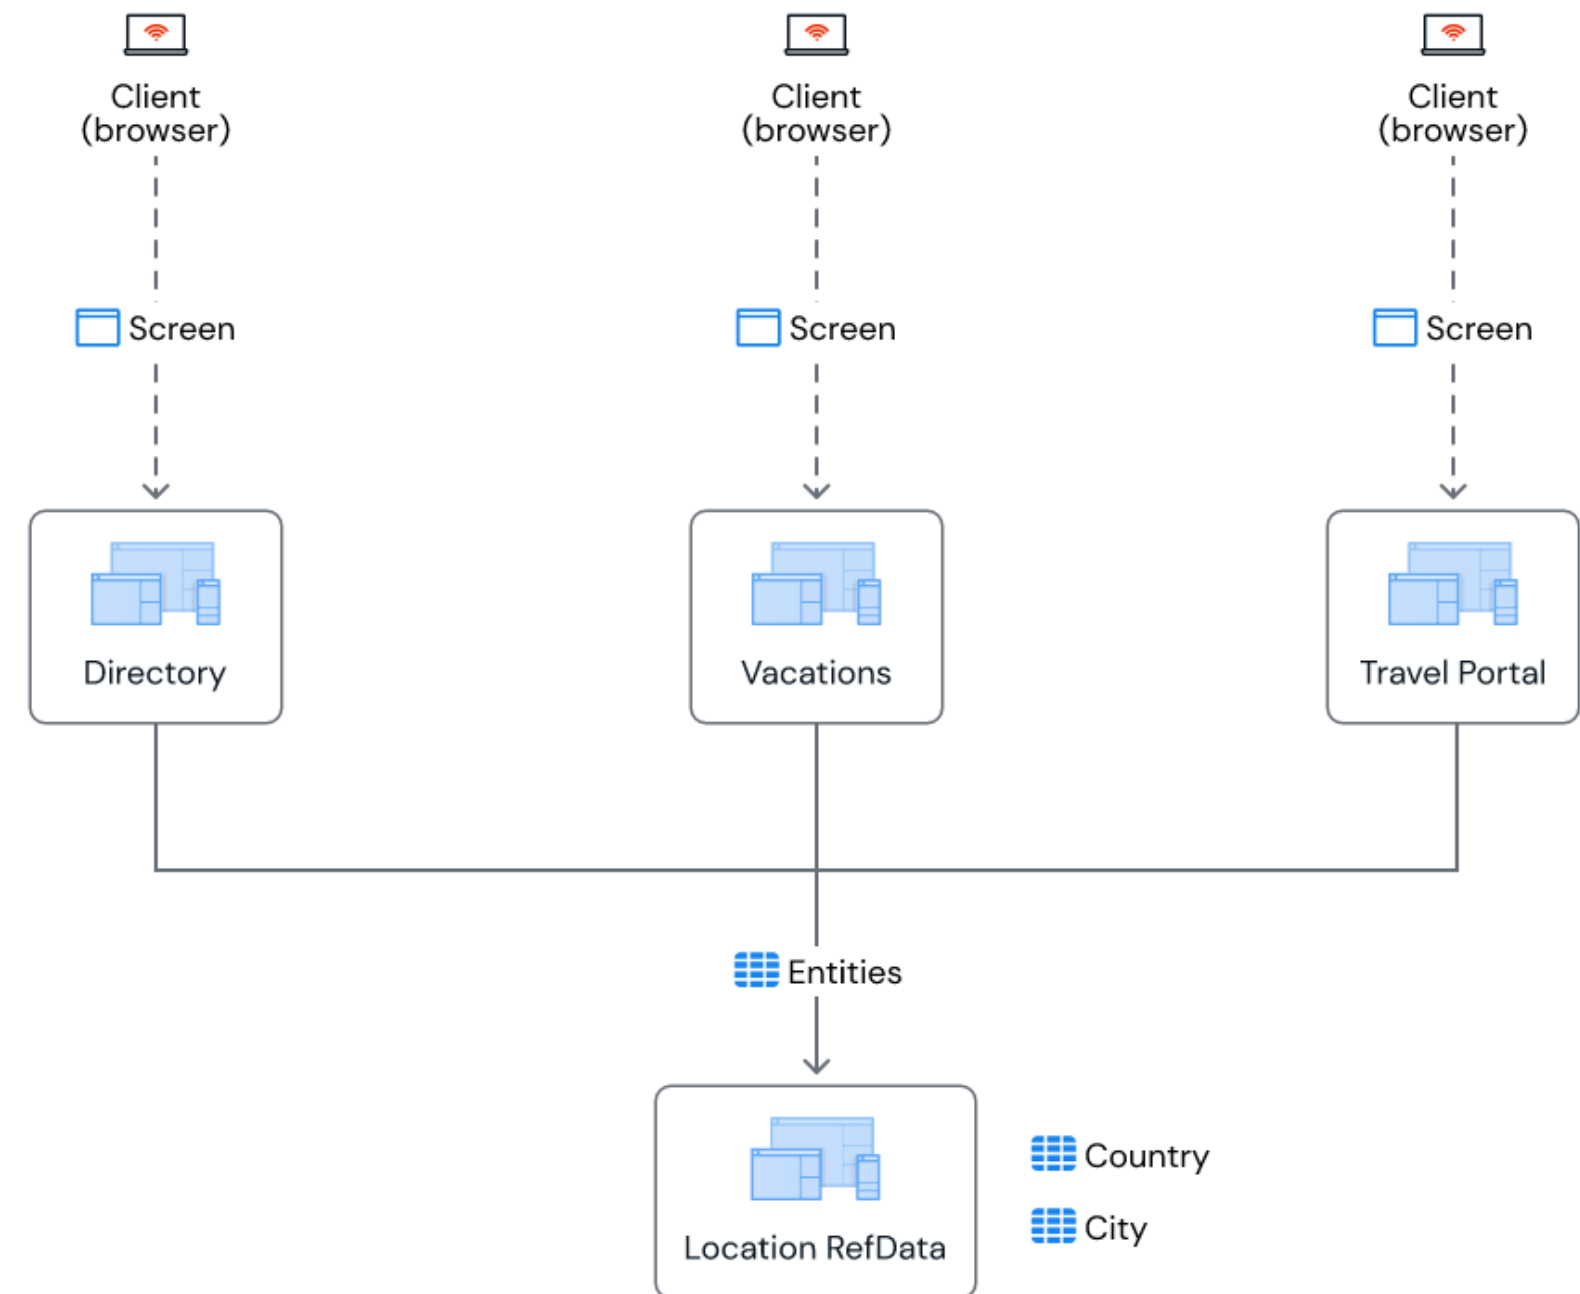

Reference Data

Reference data distinguishes itself from other types of data
by being very **business agnostic**

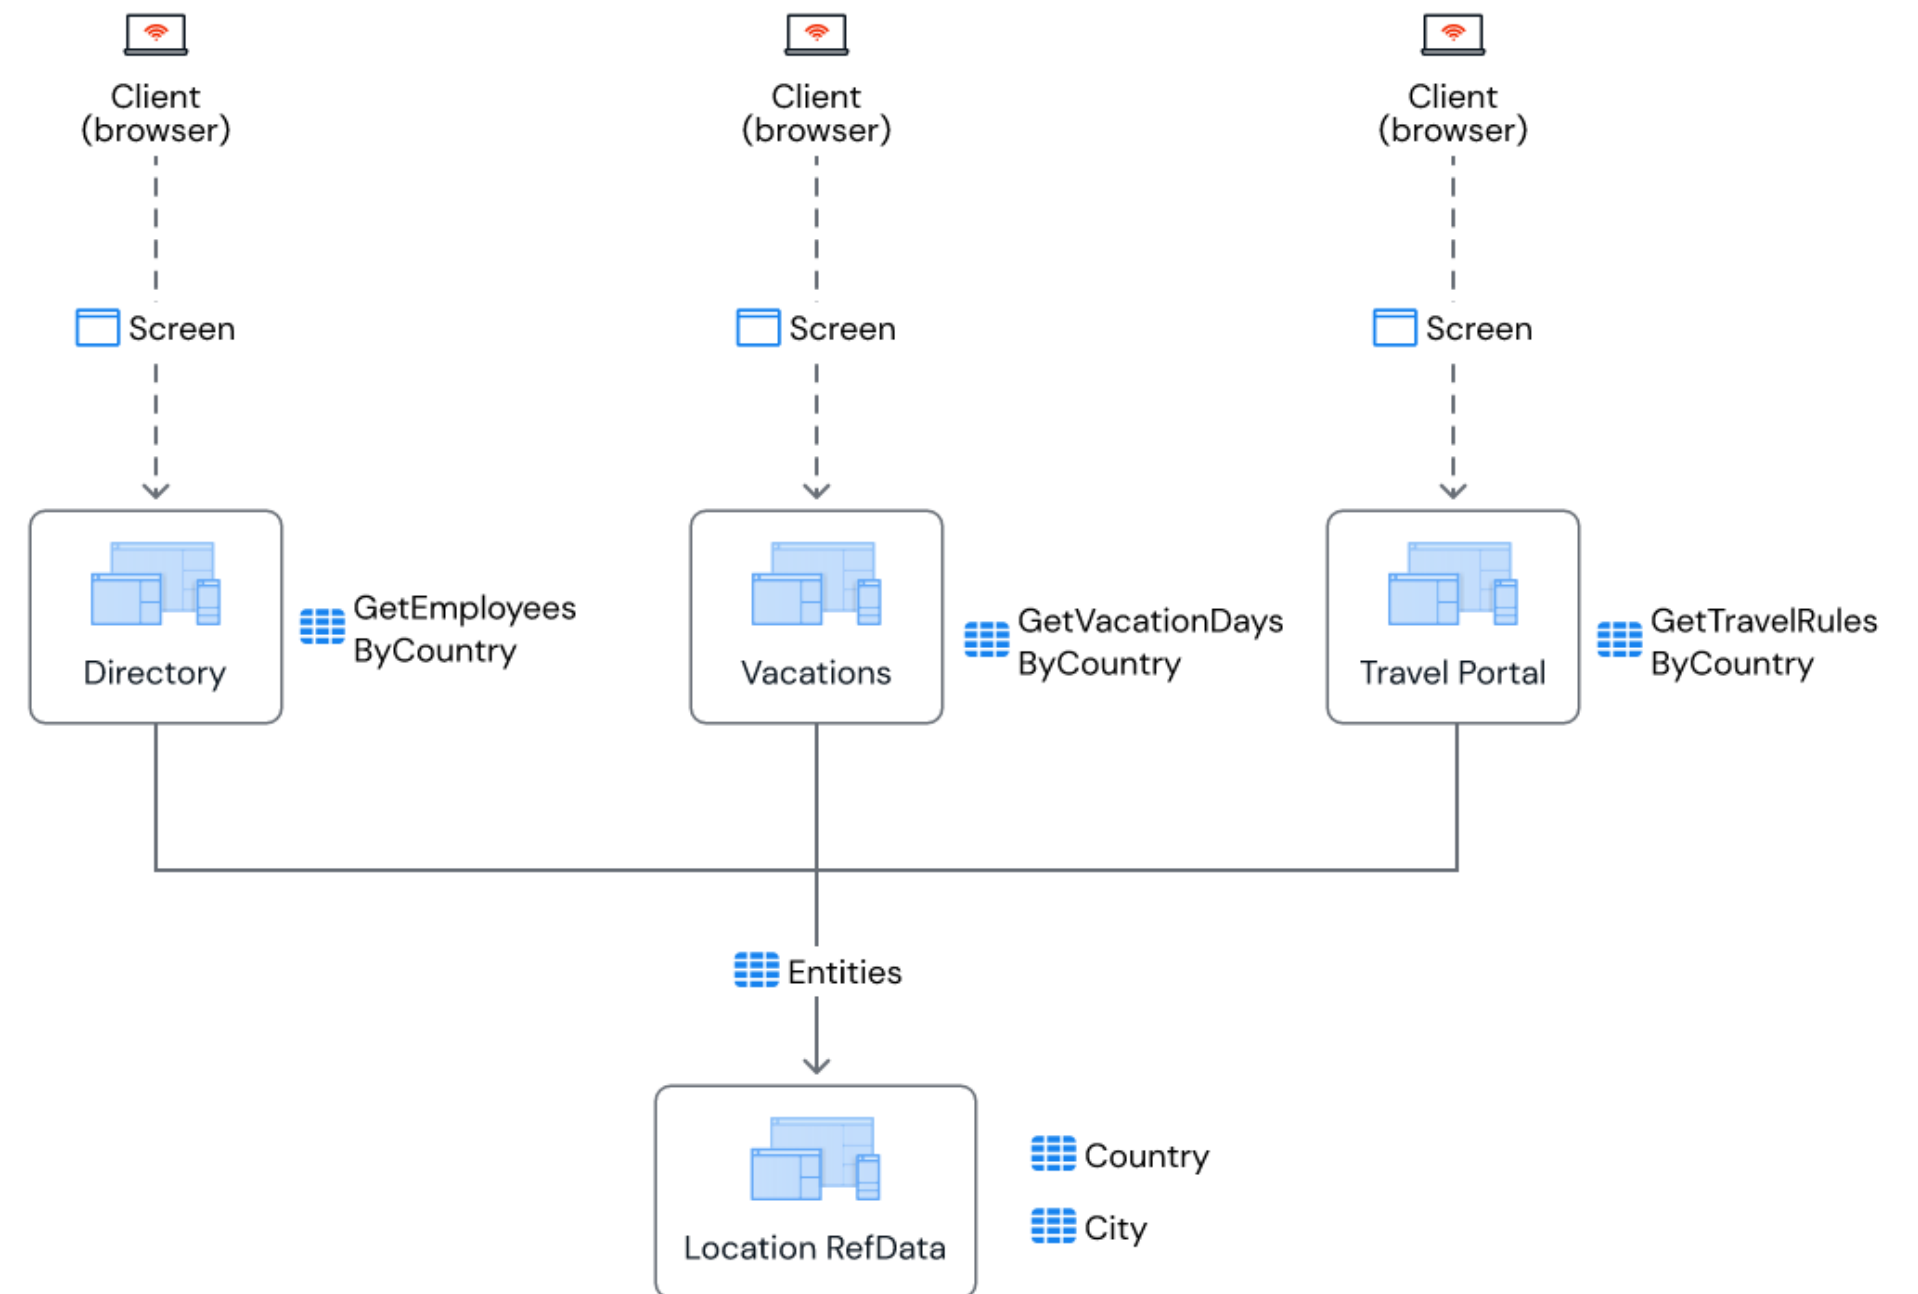

Sharing Reference Data

- Shared via public Entities
 - Referenced by consumer apps

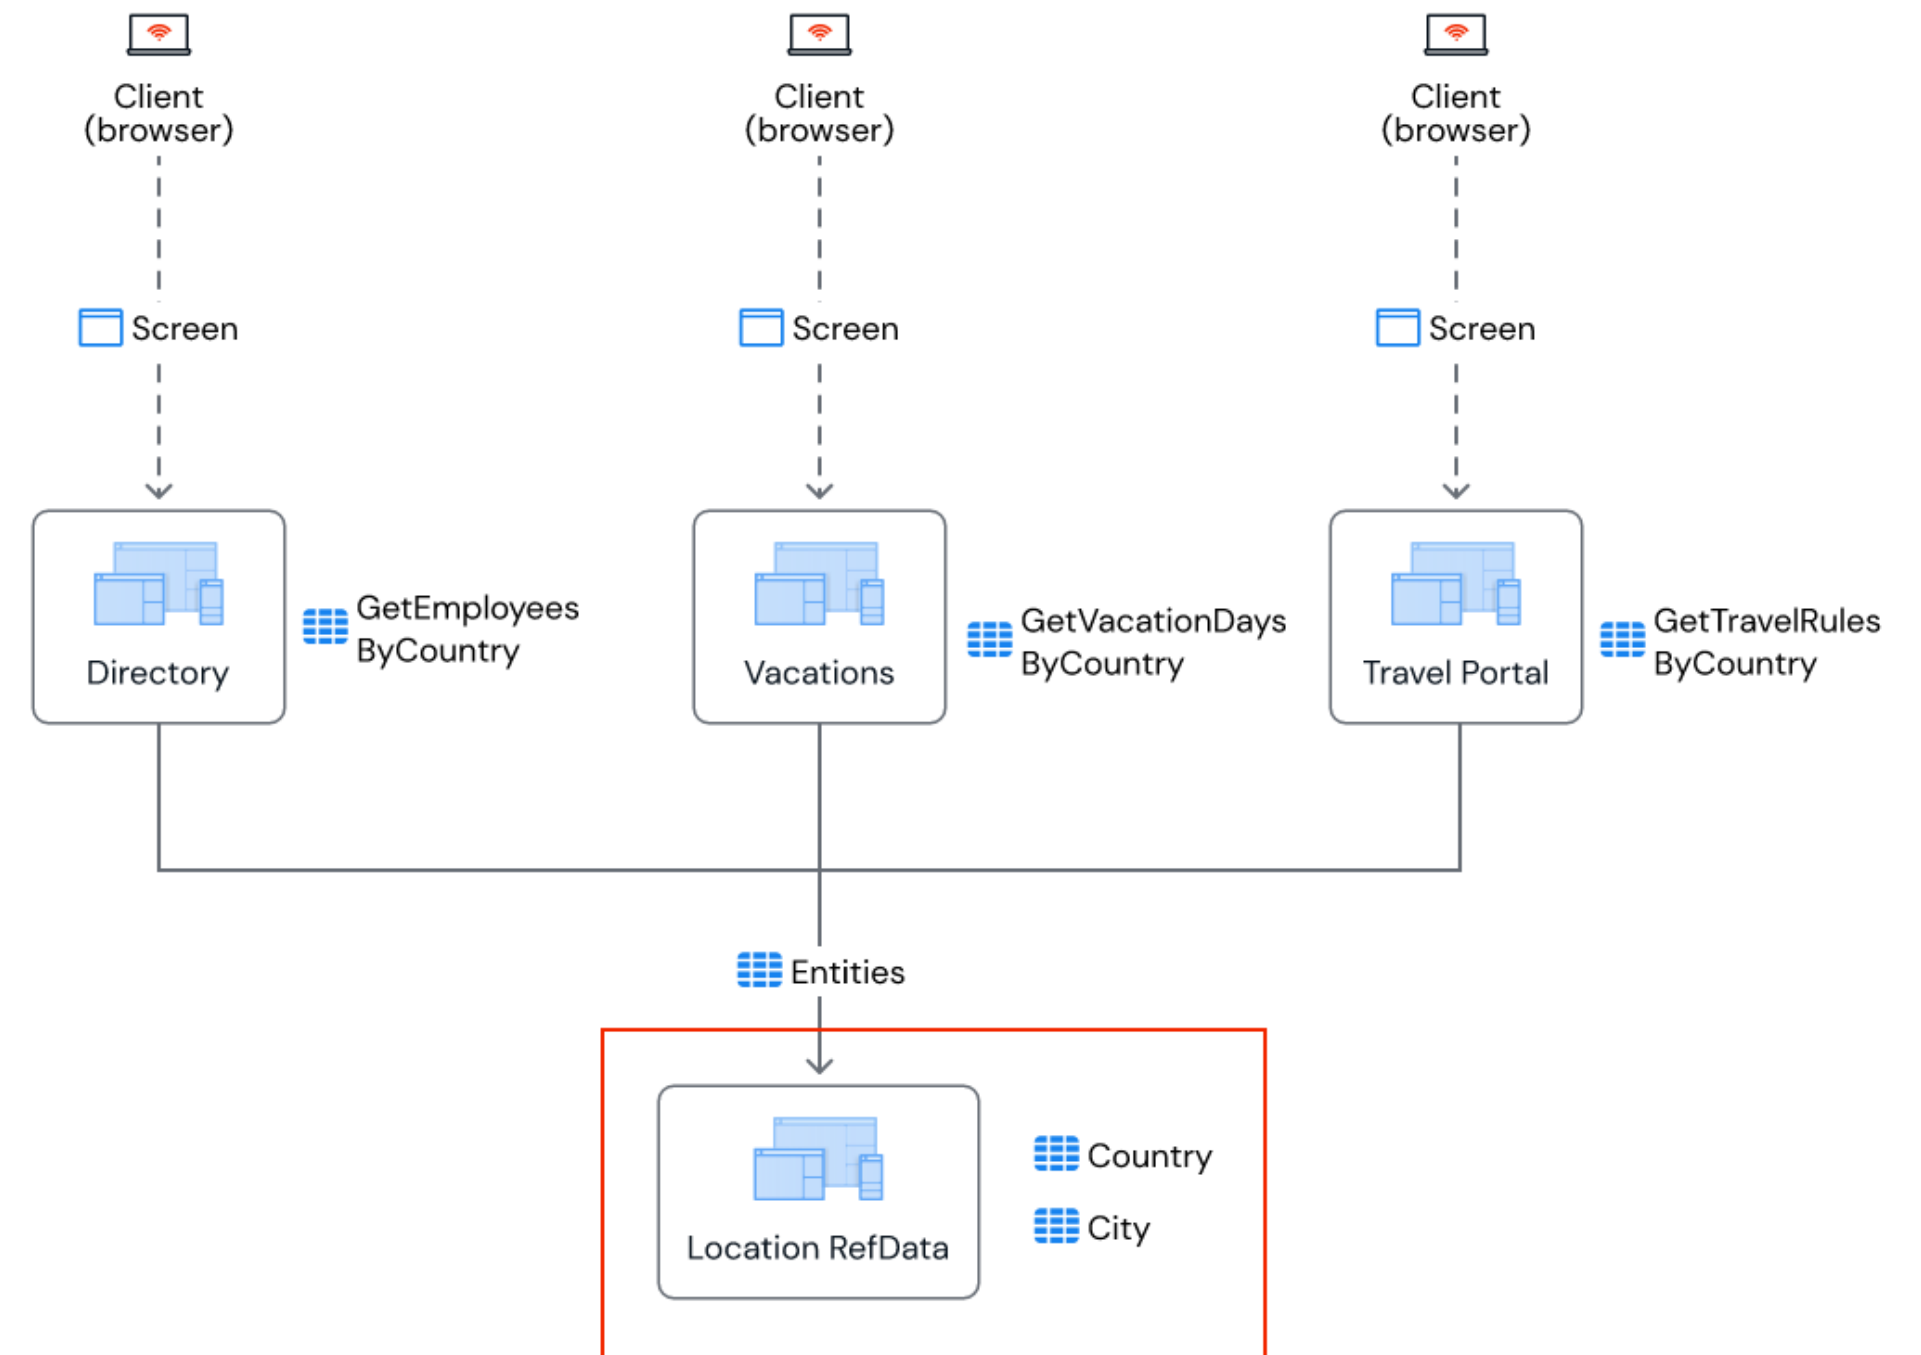

Sharing Reference Data

- Shared via public Entities
 - Referenced by consumer apps
- Entities can be used directly in the apps
 - Lower development effort

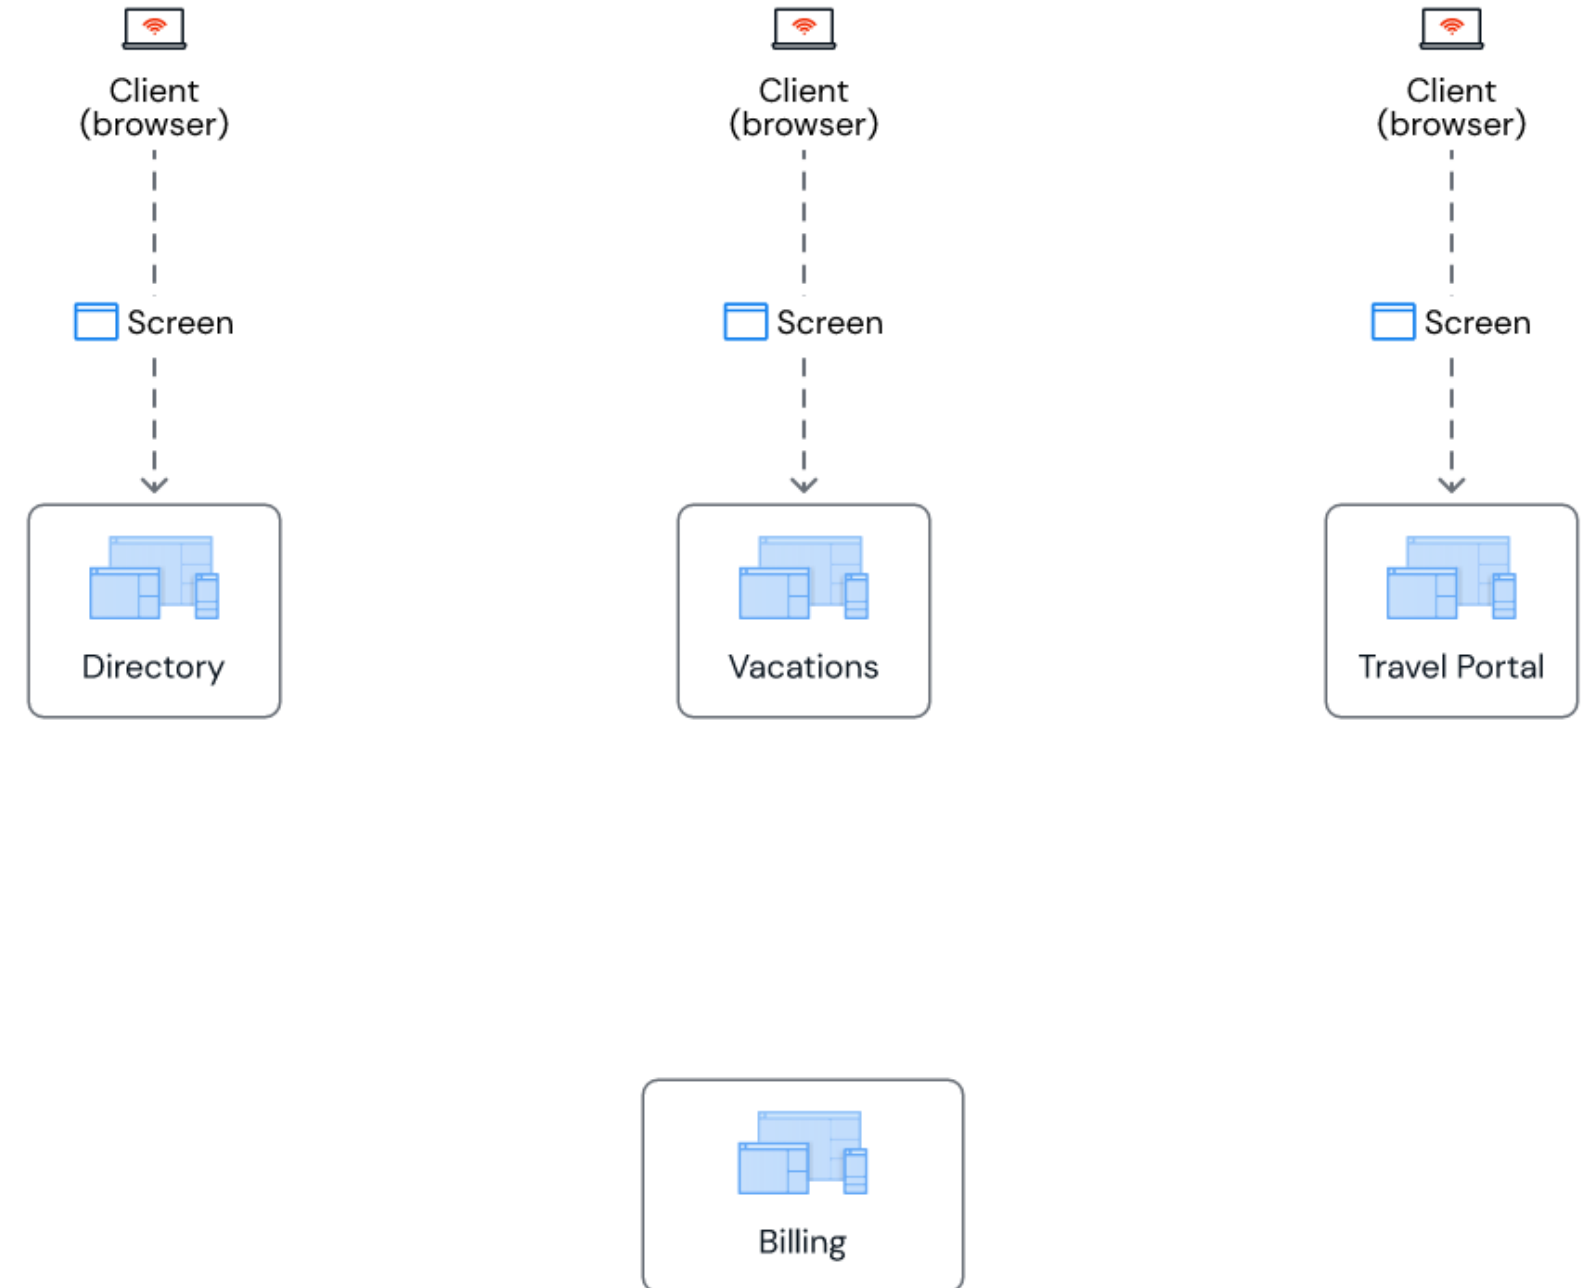

Sharing Reference Data

- Shared via public Entities
 - Referenced by consumer apps
- Entities can be used directly in the apps
 - Lower development effort
- Follow the Architecture design process

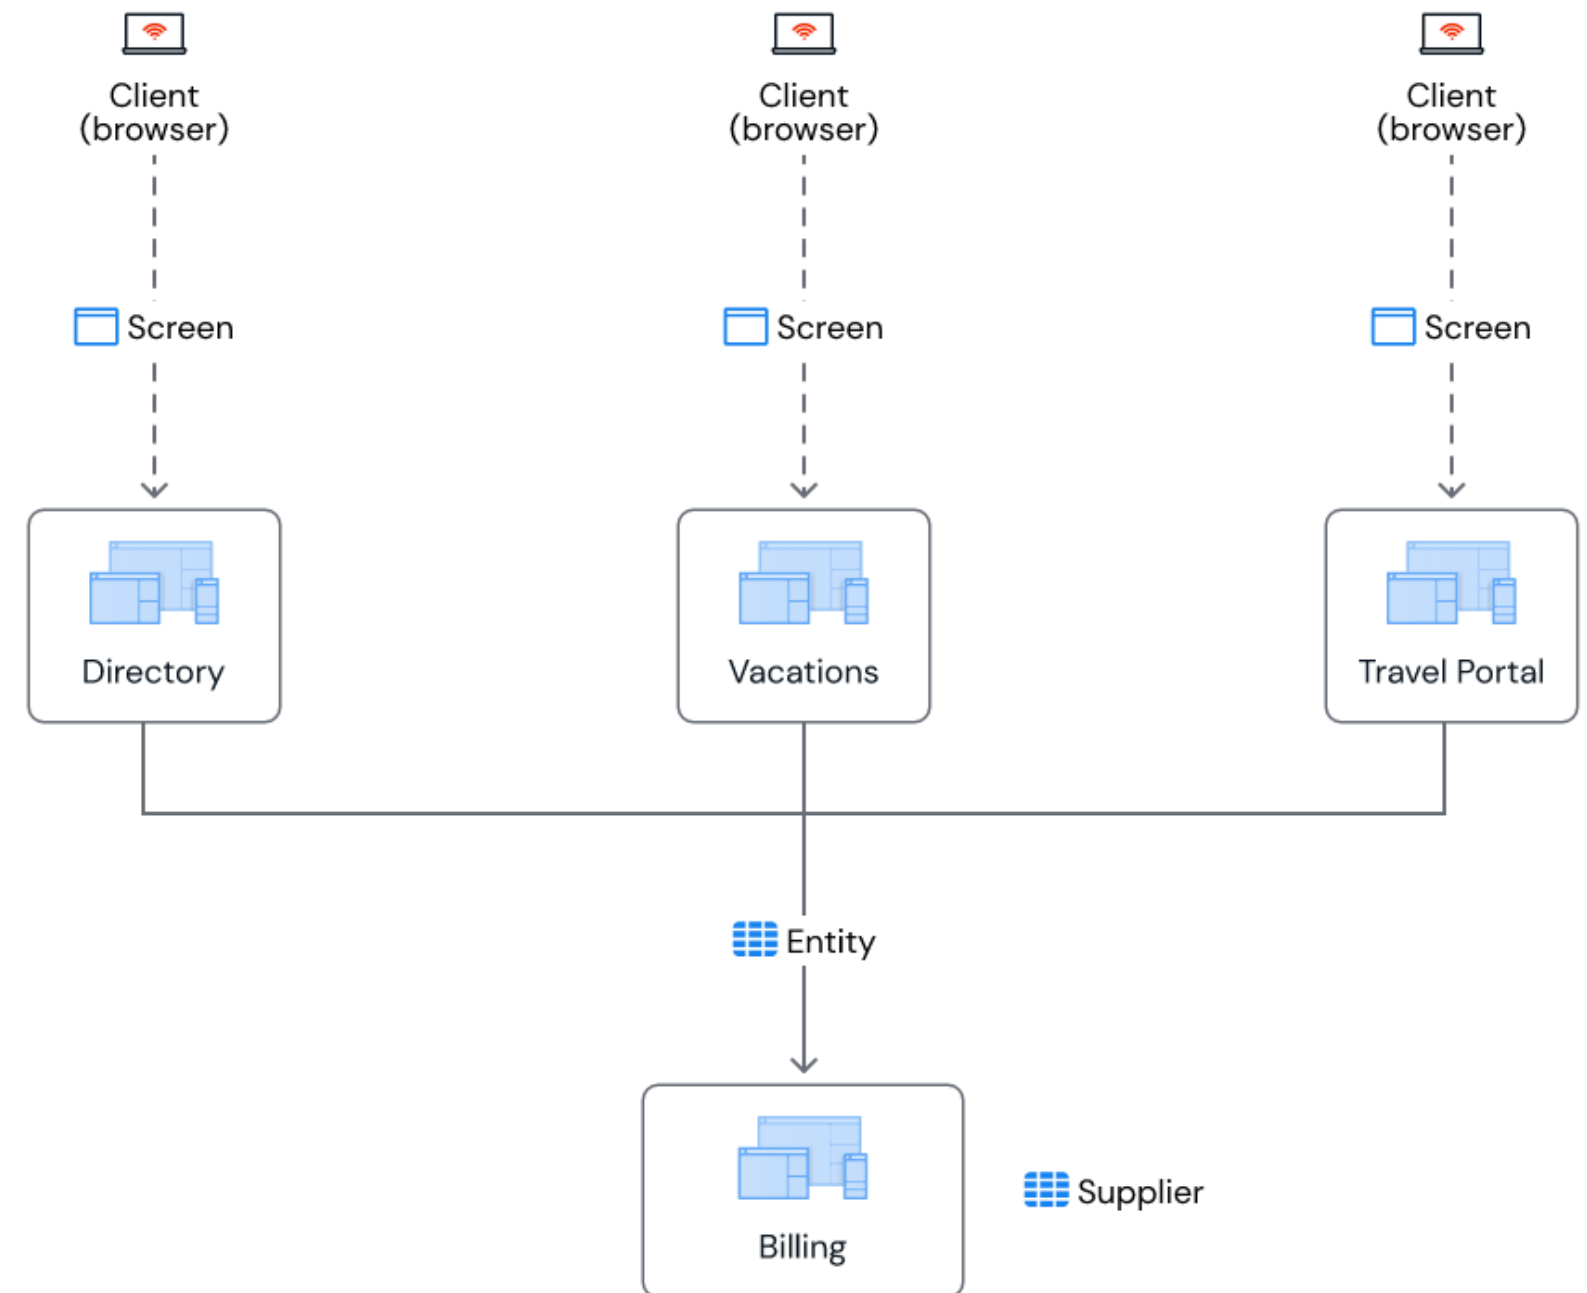

Sharing Business Data

- Stable data model as the business evolves
- Slow change of pace

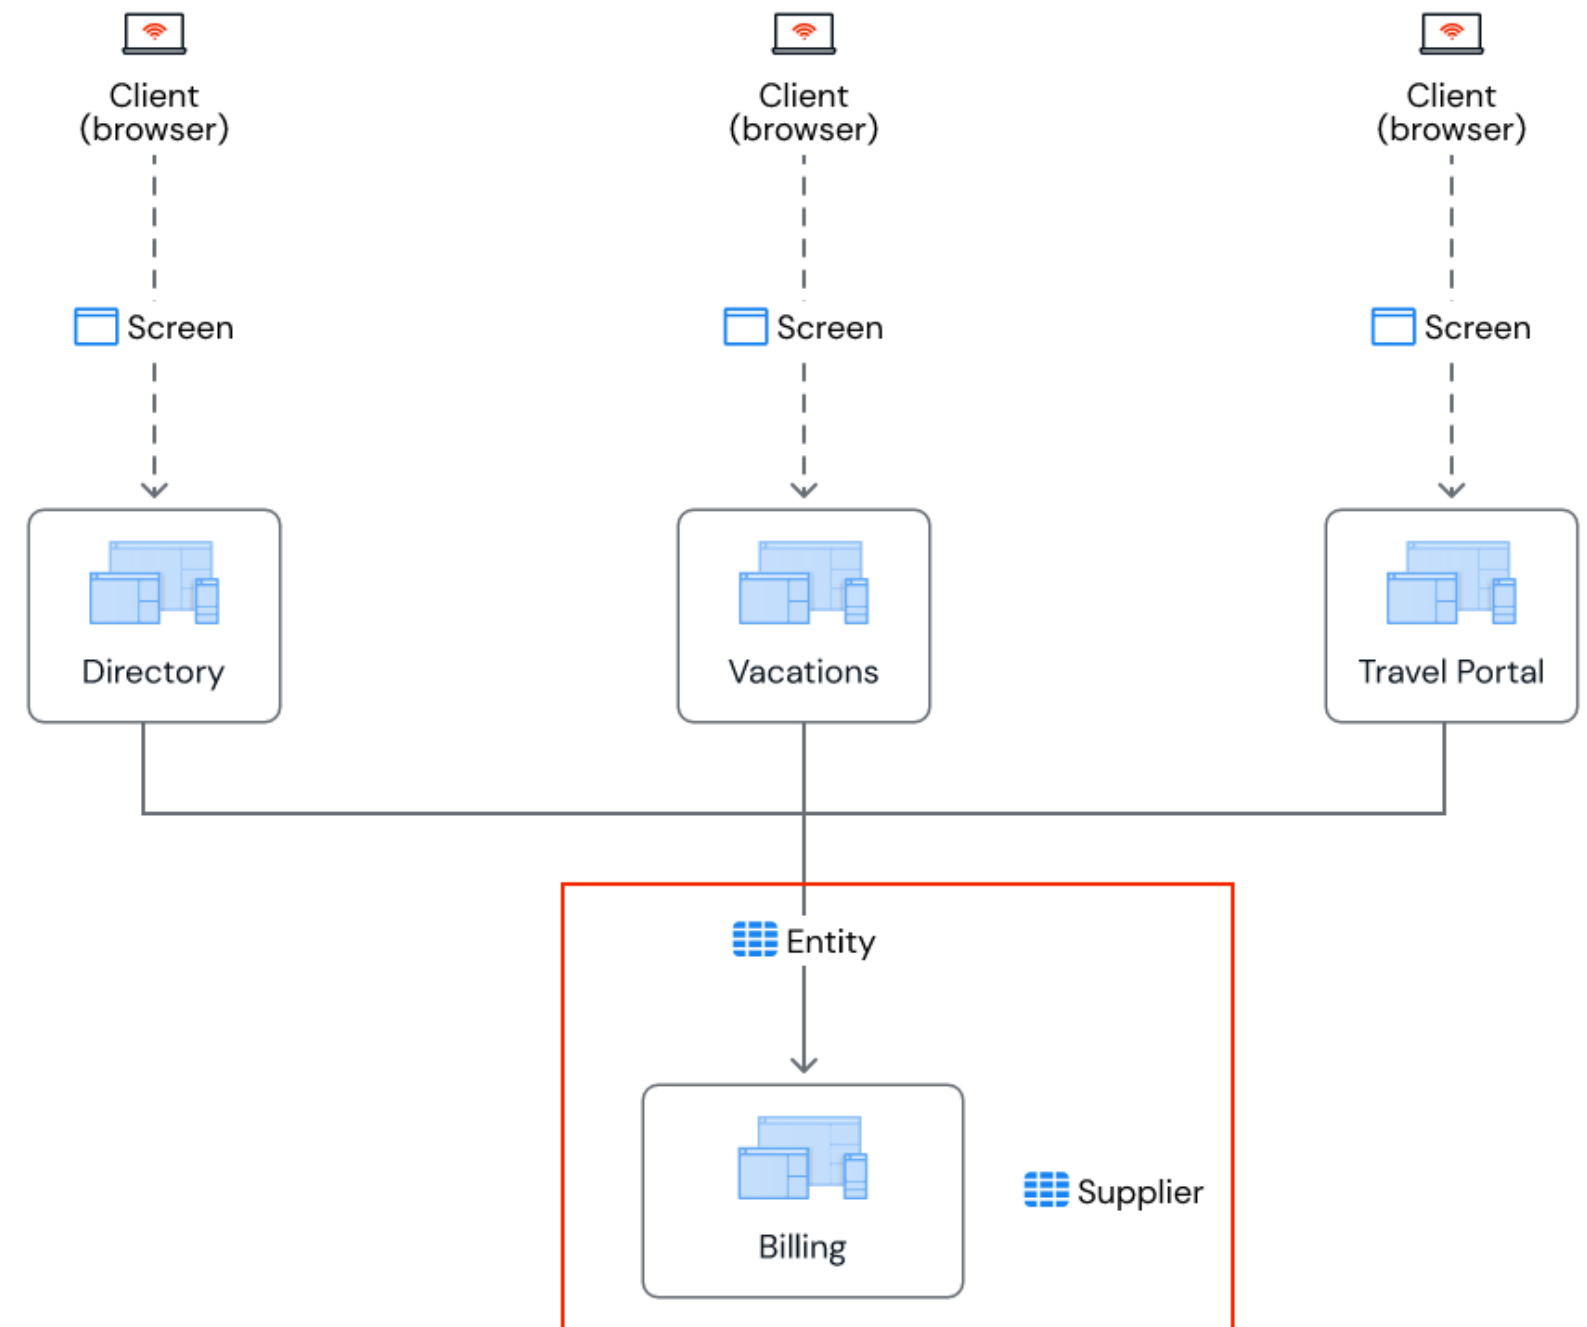

Sharing Business Entities with Plain Data

- Does not have complex business rules
- Does not require deep business knowledge

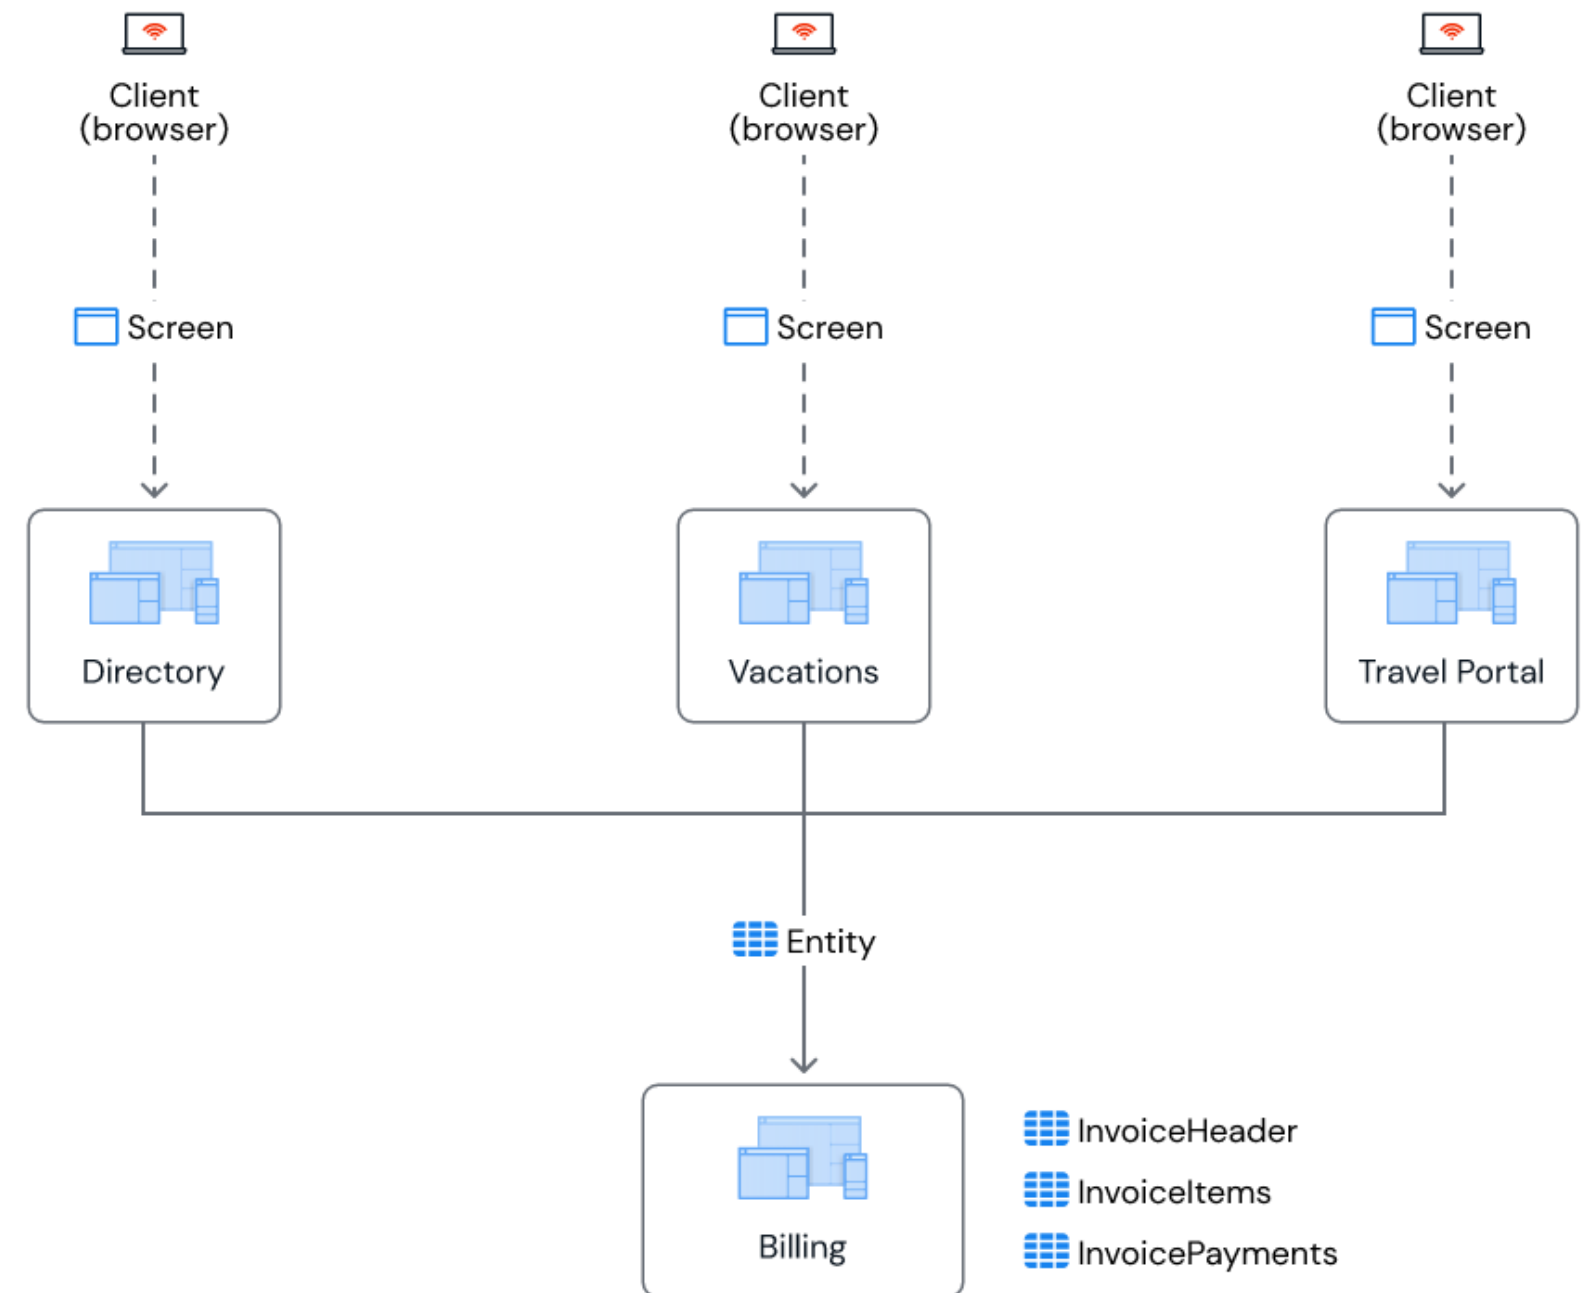

Sharing Business Entities with Plain Data

- Does not have complex business rules
- Does not require deep business knowledge
- Shared via public Entities

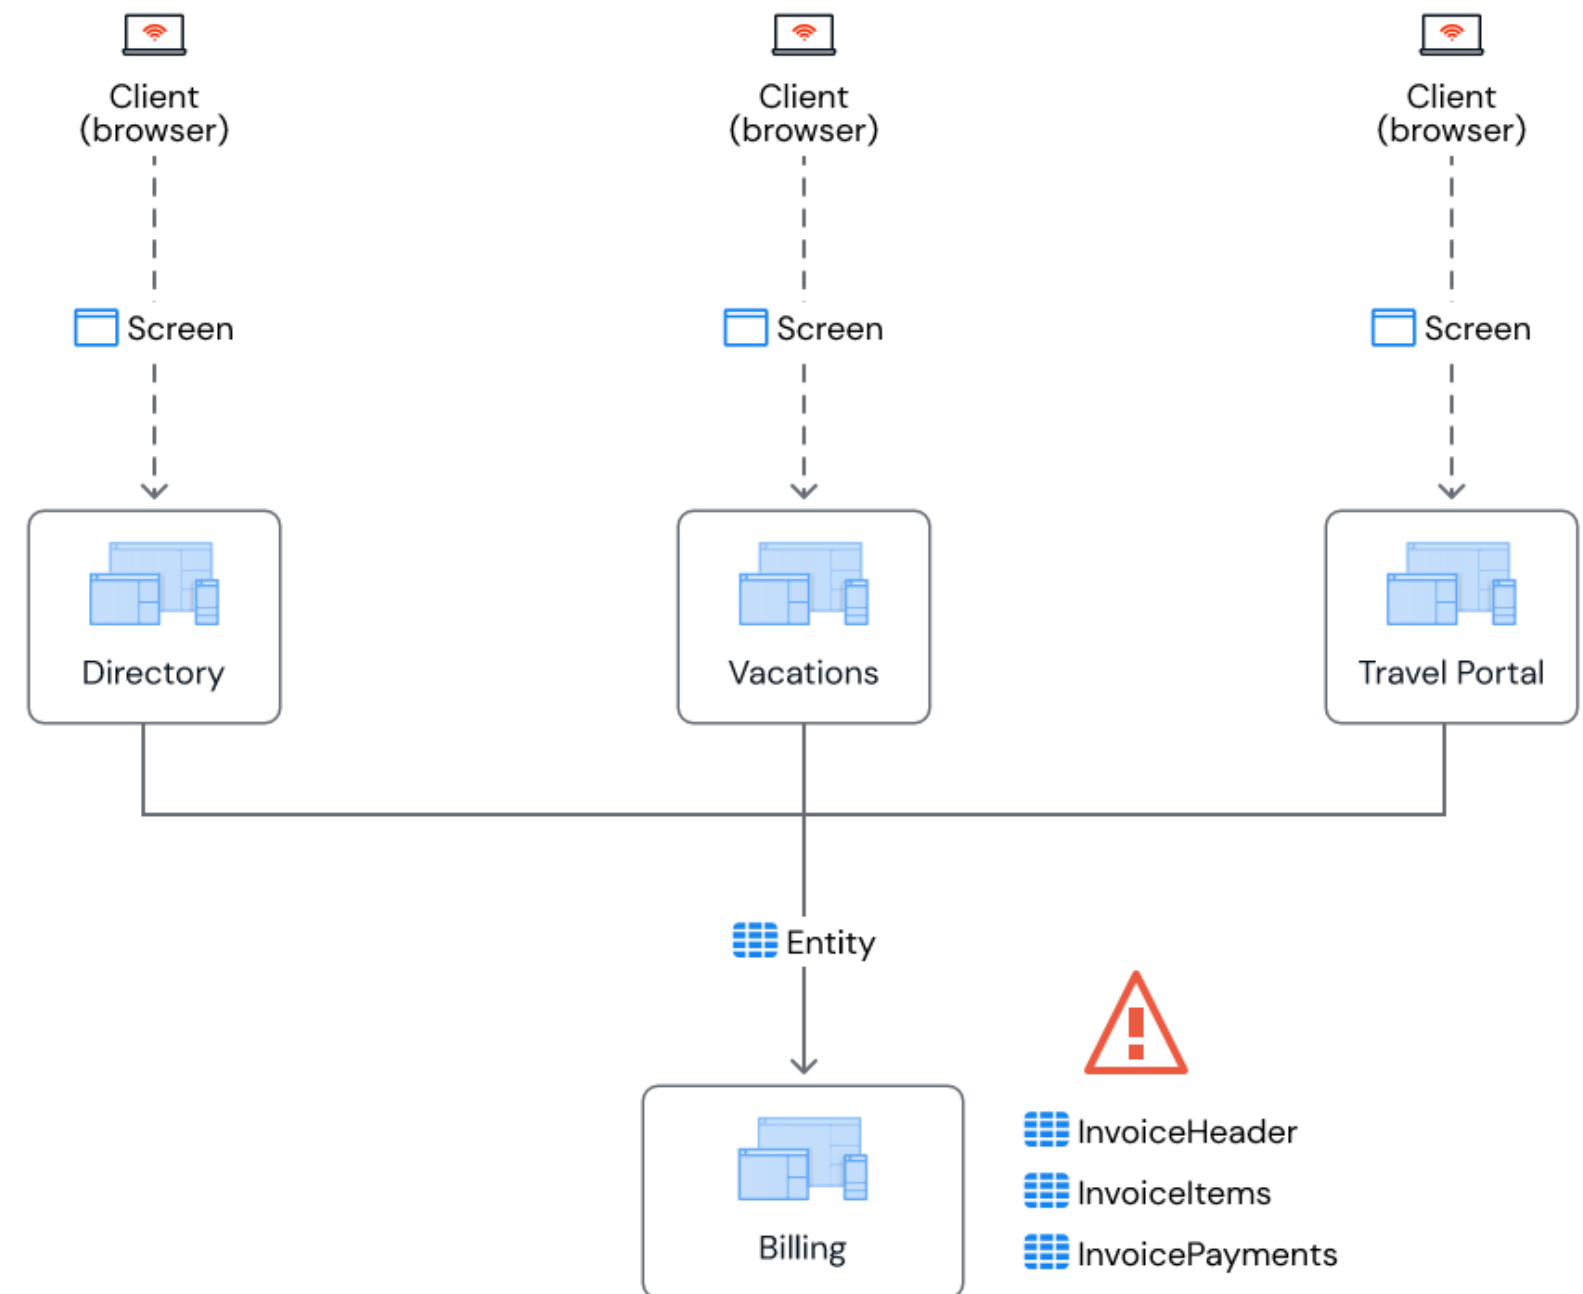

Sharing Business Data with Business Rules

- Public Entities might not be the best approach

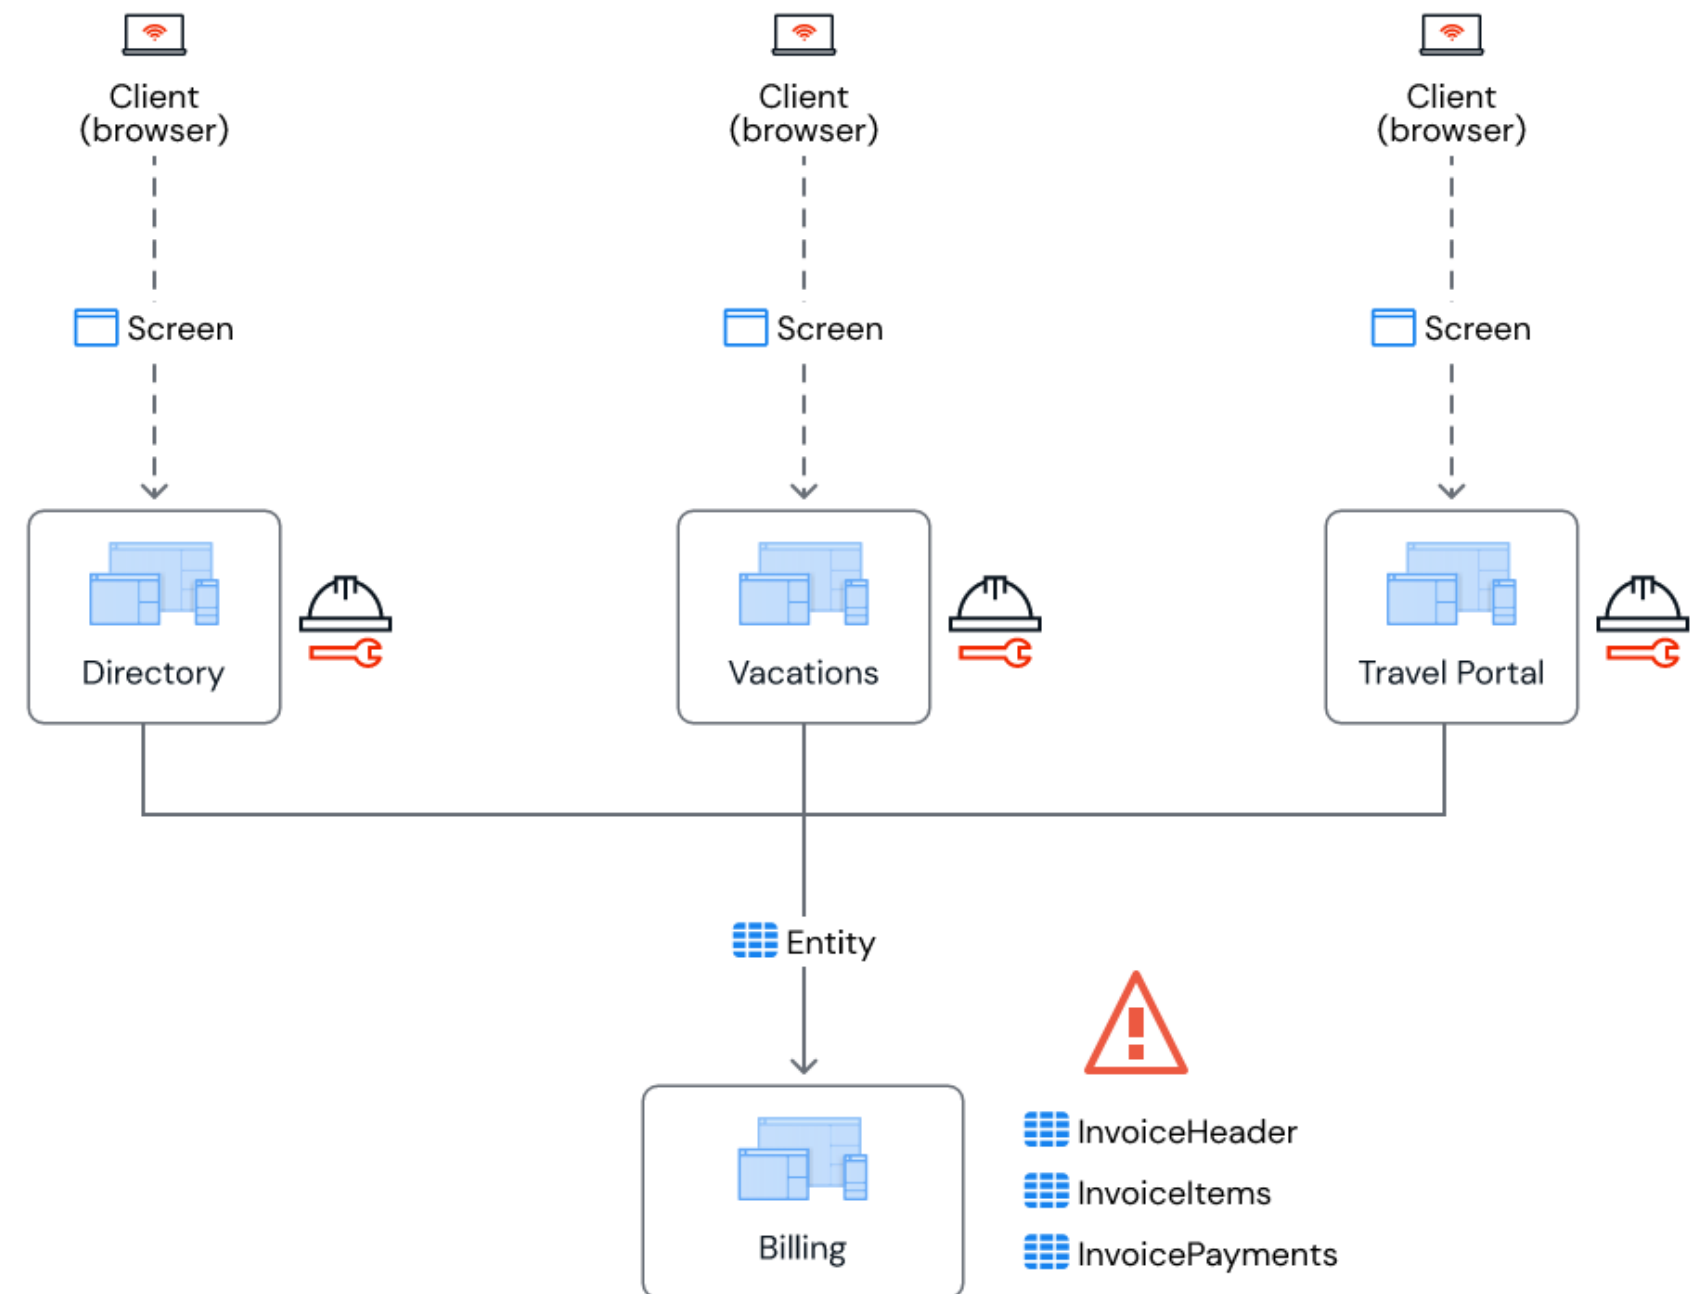

Sharing Business Data with Business Rules

- Public Entities might not be the best approach
- Risk of spreading business rules in consumers
 - Business rules evolve
 - Entities may change

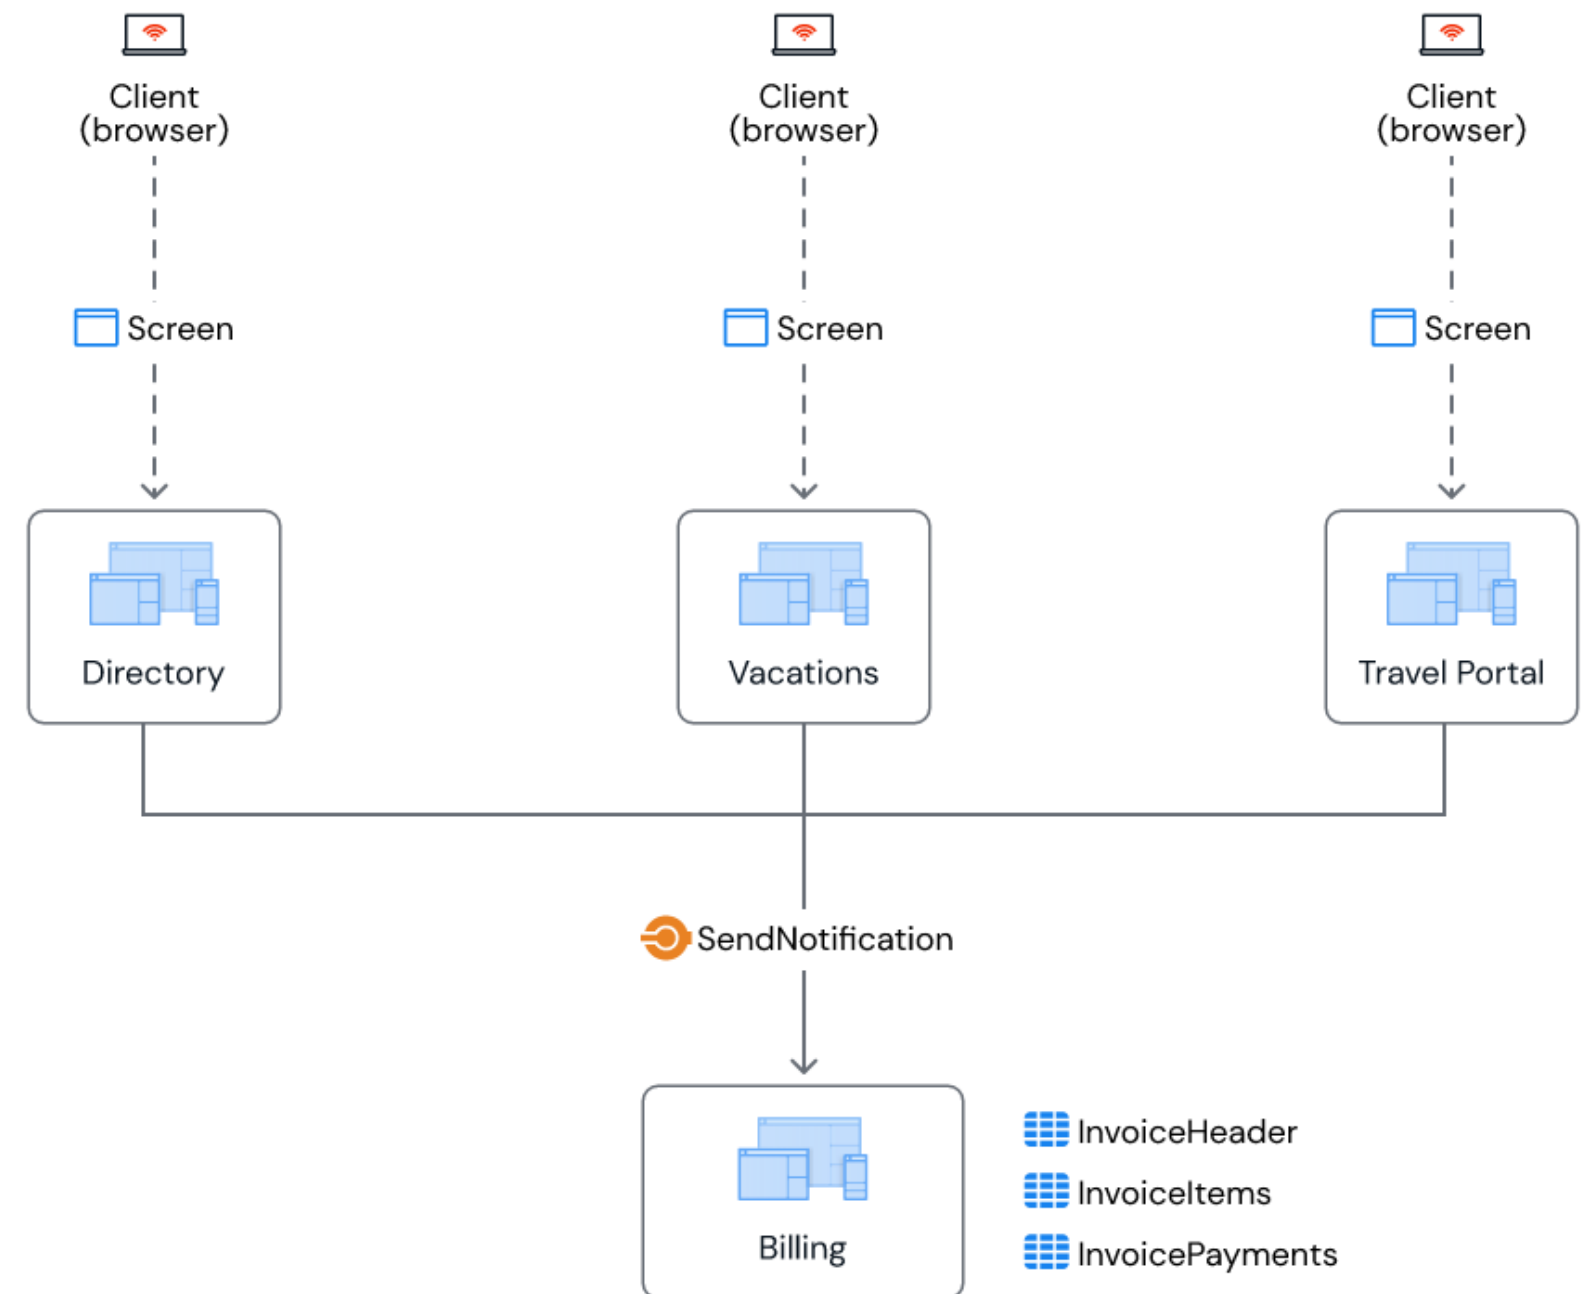

Sharing Business Data with Business Rules

- Public Entities might not be the best approach
- Risk of spreading business rules in consumers
 - Business rules evolve
 - Entities may change
- Maintainability is key!
 - Avoid impact on consumers

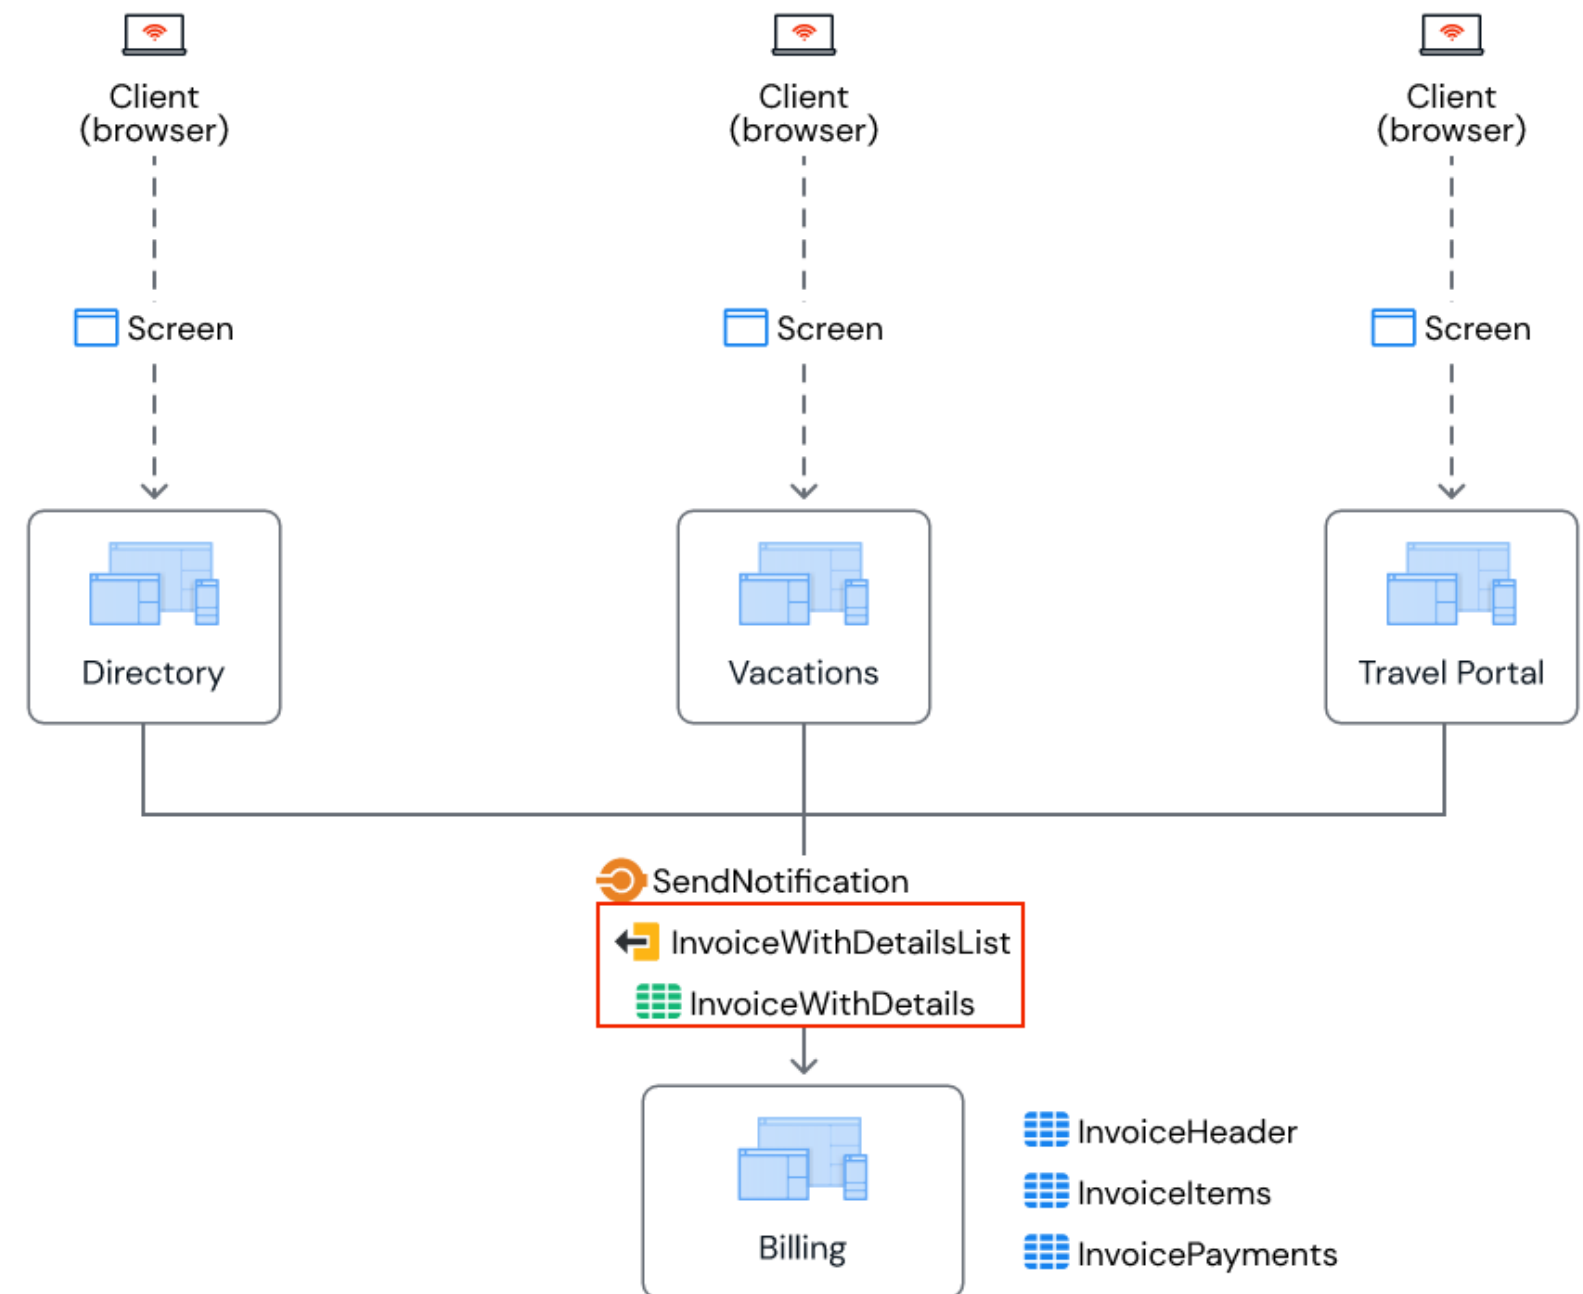

Sharing Business Data with Business Rules

- Encapsulation with Service Actions
 - Abstracts the complexity
 - Business rules remain centralized
 - Ownership clearly defined

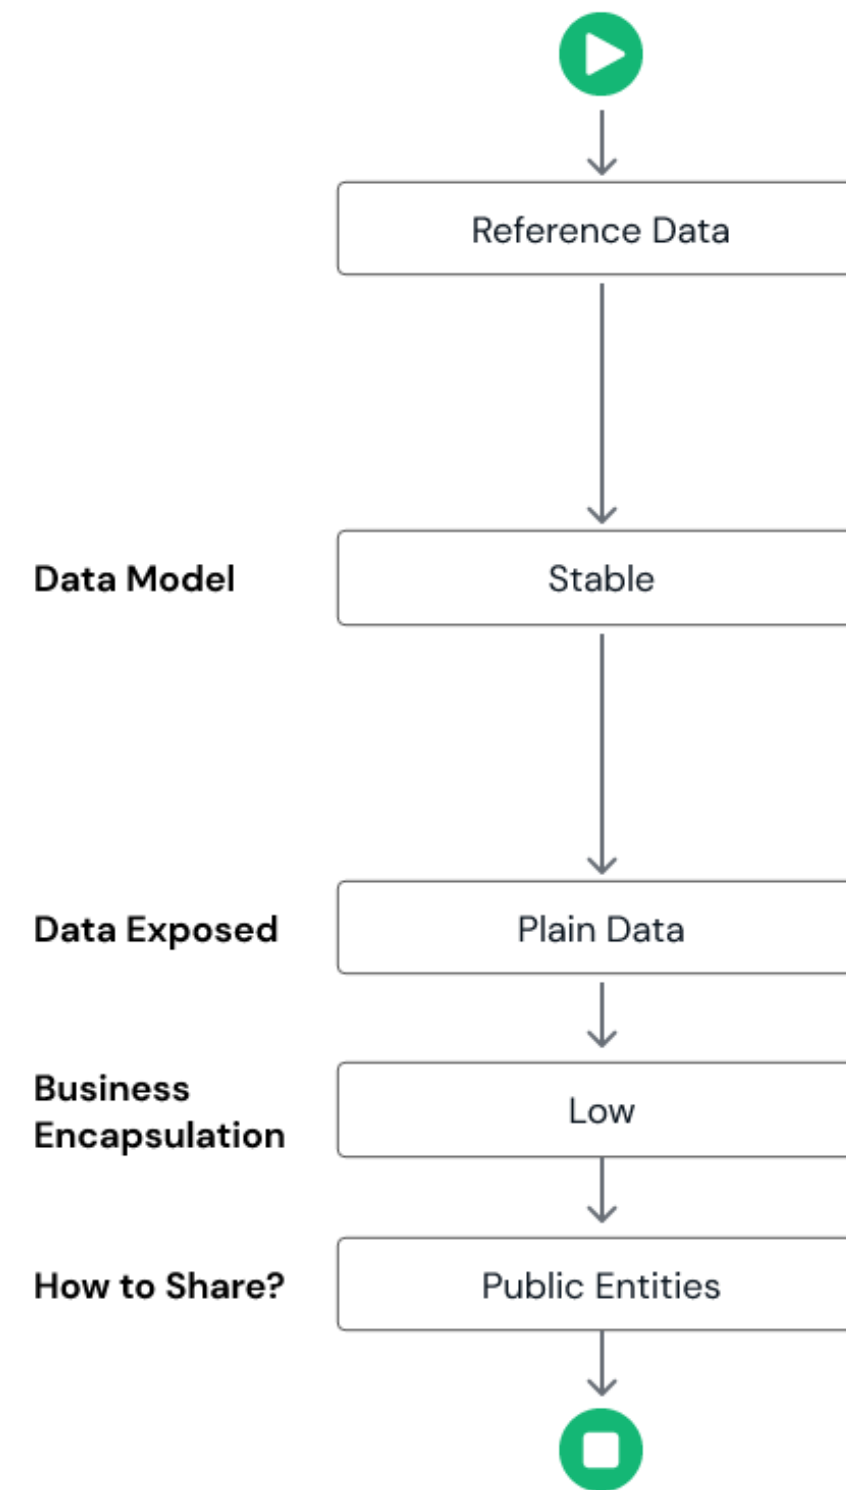

Sharing Business Data with Business Rules

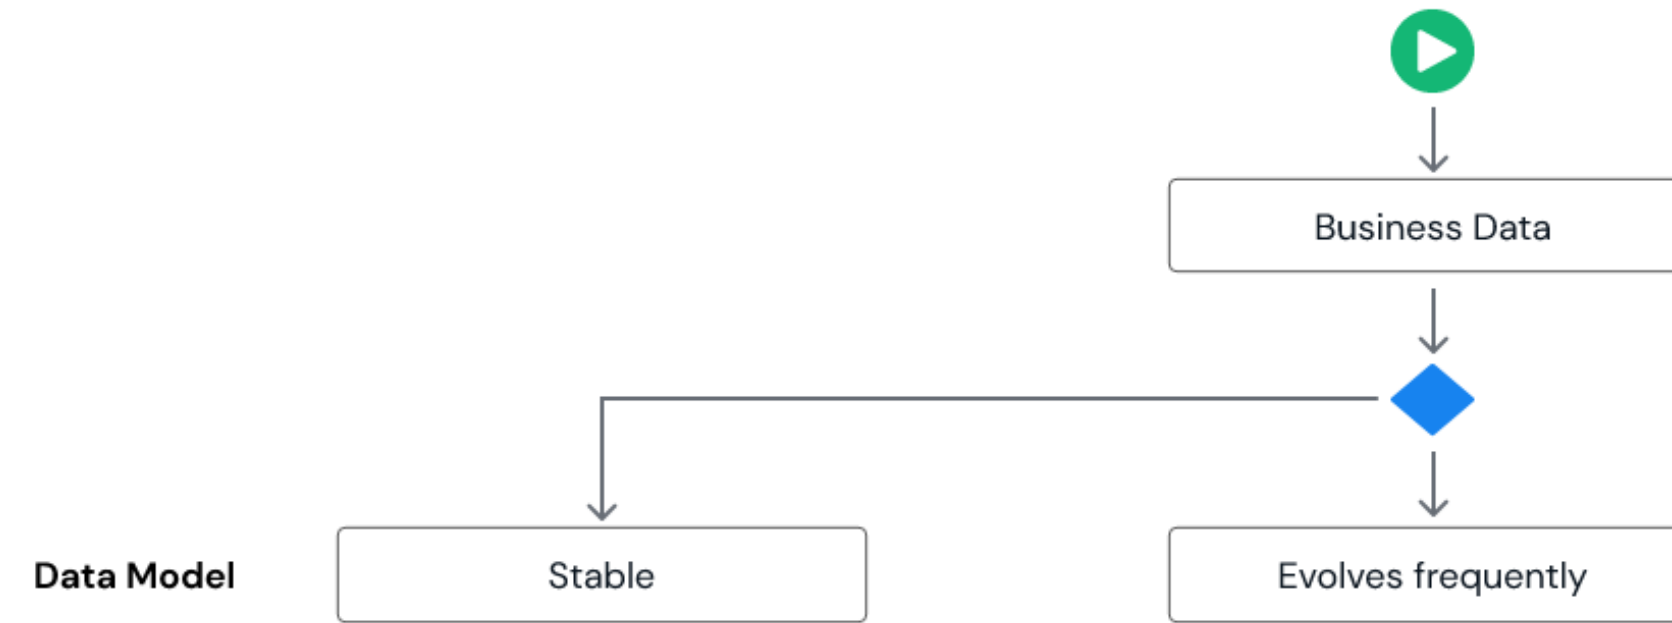

- Encapsulation with Service Actions
 - Abstracts the complexity
 - Business rules remain centralized
 - Ownership clearly defined
- Optimized output data
 - Only contains the data expected by consumers
