

Cloud-native Patterns

Managing Files on the Cloud
Integration with Traditional Code
Legacy Integrations

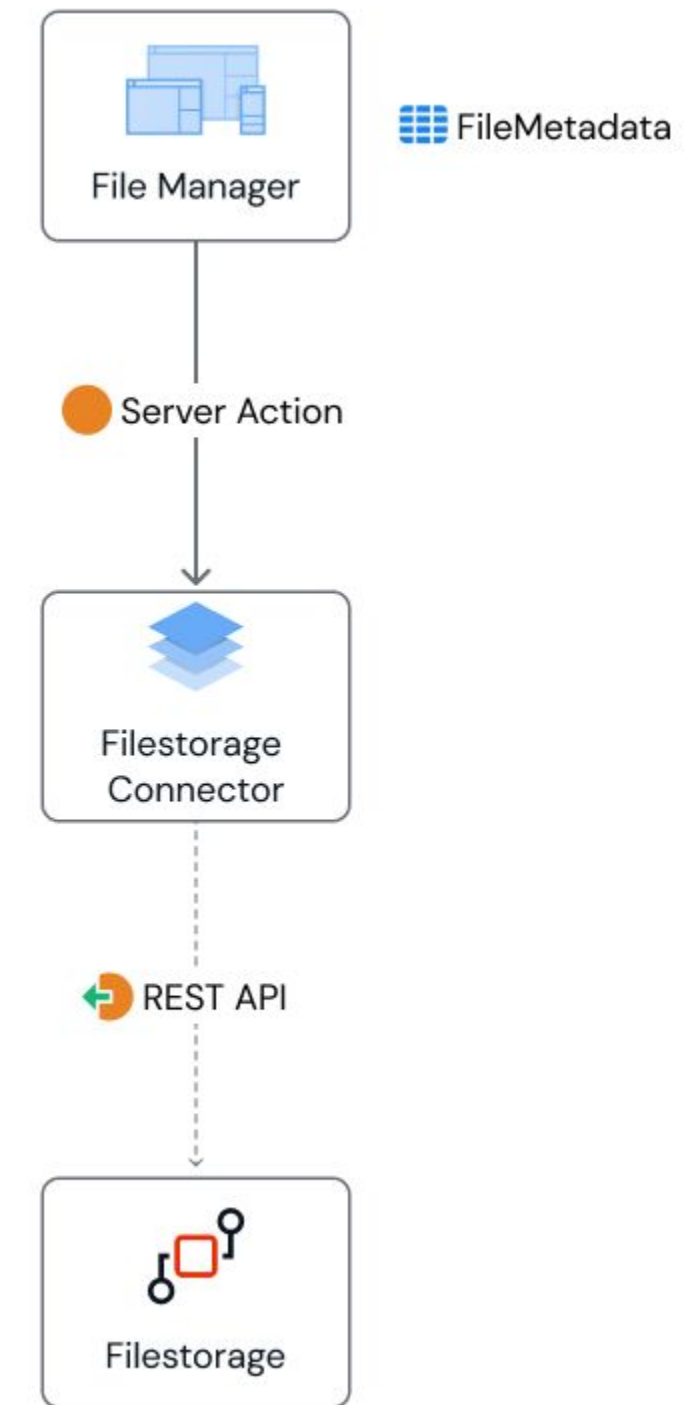

Managing Files on the Cloud

- Using Sharepoint to store and retrieve files
- Library to manage requests to the Sharepoint API
- Configurations should be handled inside the app

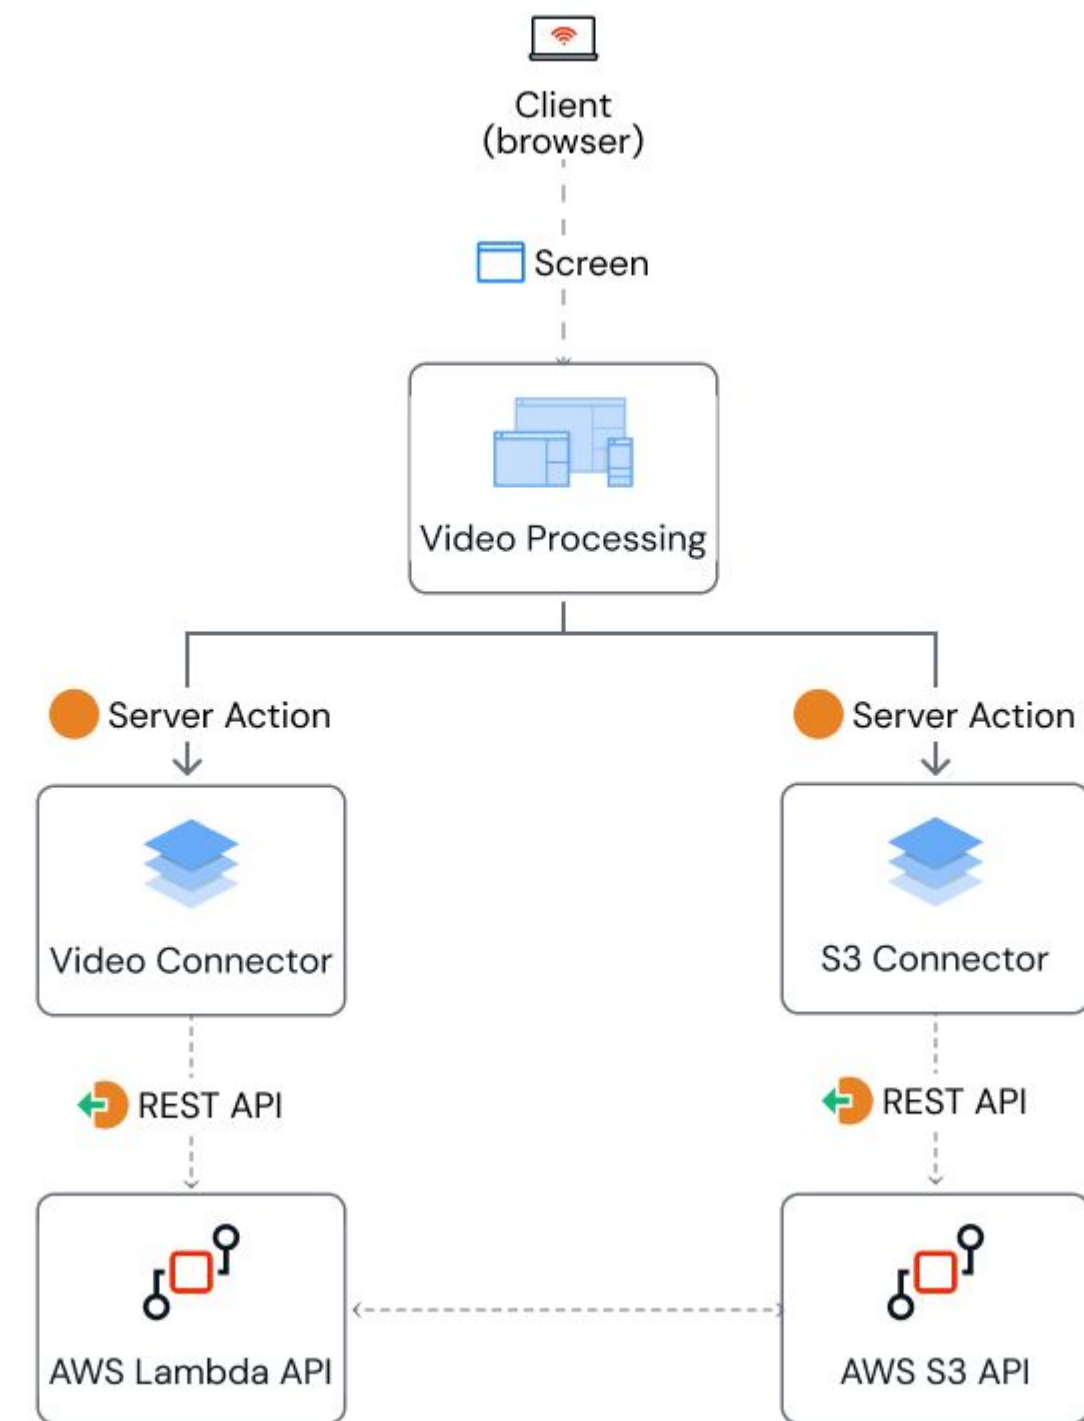

Managing Files on the Cloud

- Library to manage requests to the File Storage API
- File Storage API abstracts the file system operations

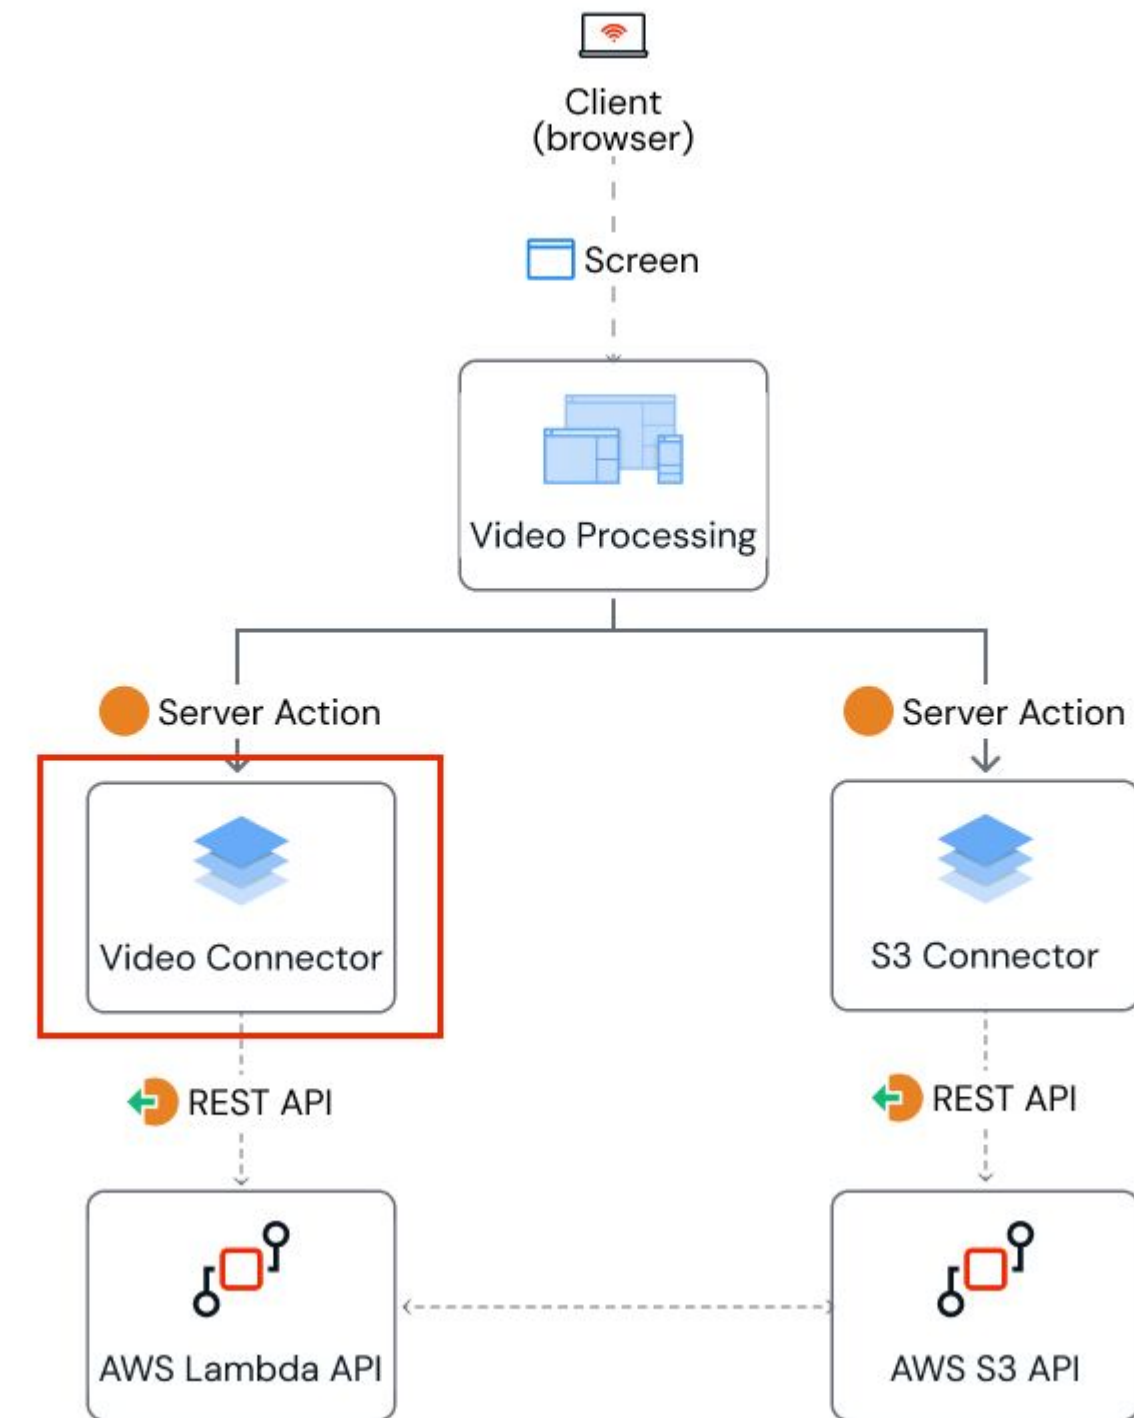

Integration with Traditional Code

- Video Processing: Using AWS to run traditional code

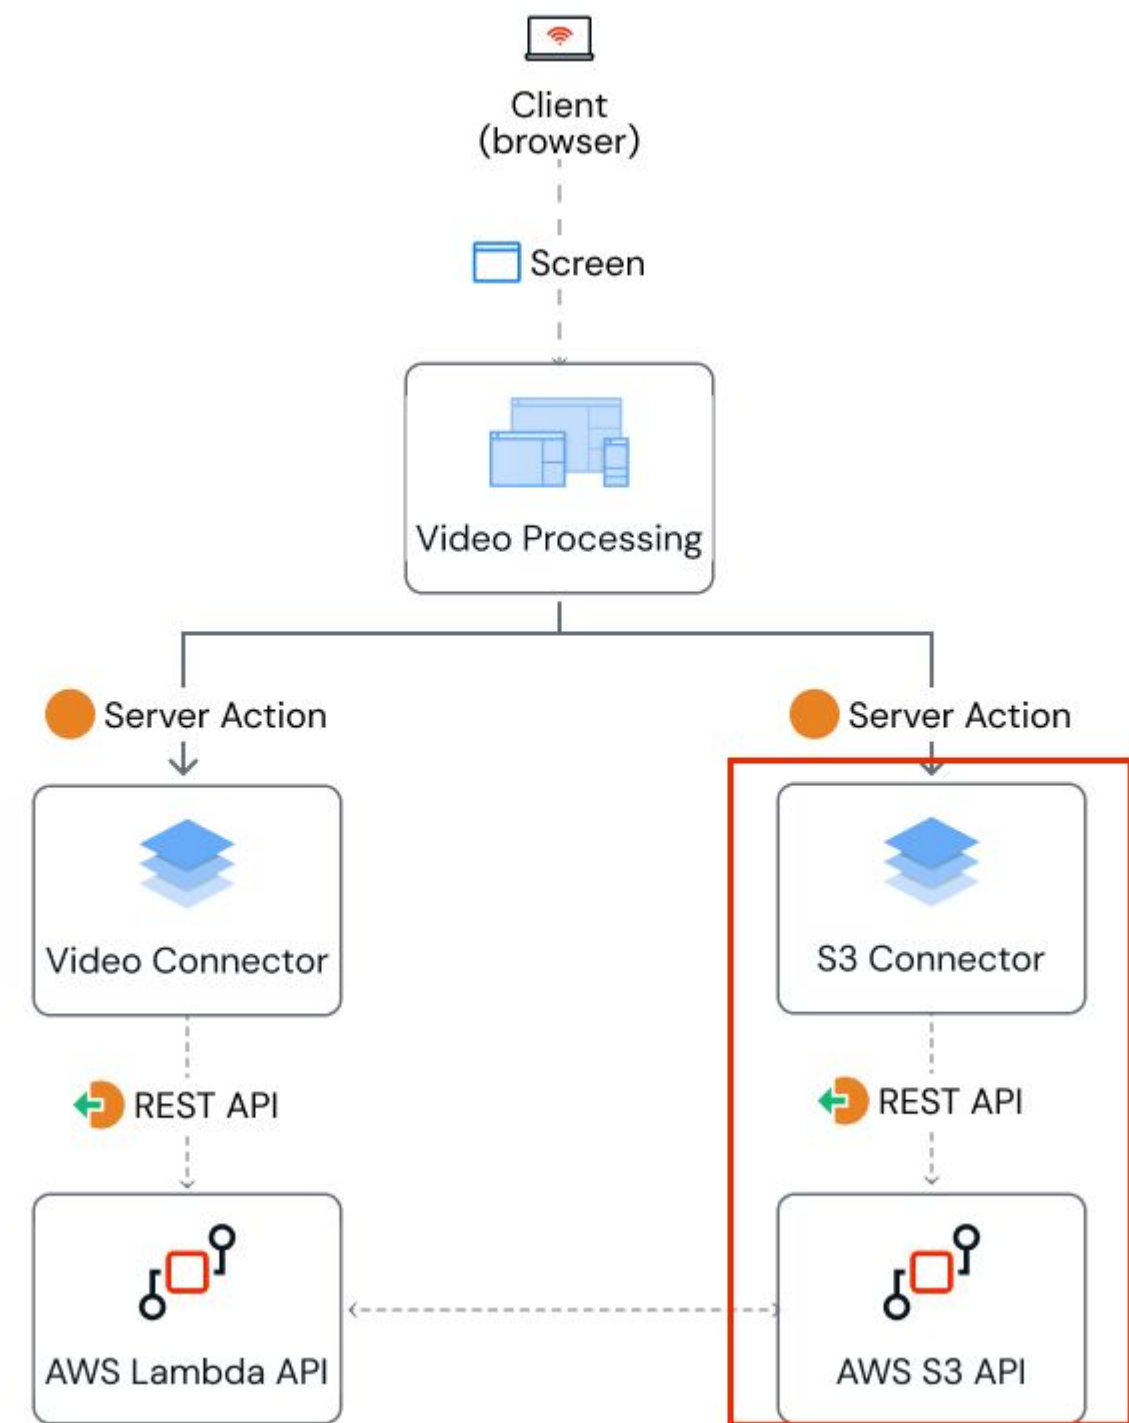

Integration with Traditional Code

- Video Processing: Using AWS to run traditional code
- Video connector Library to handle communication with the AWS Lambda API

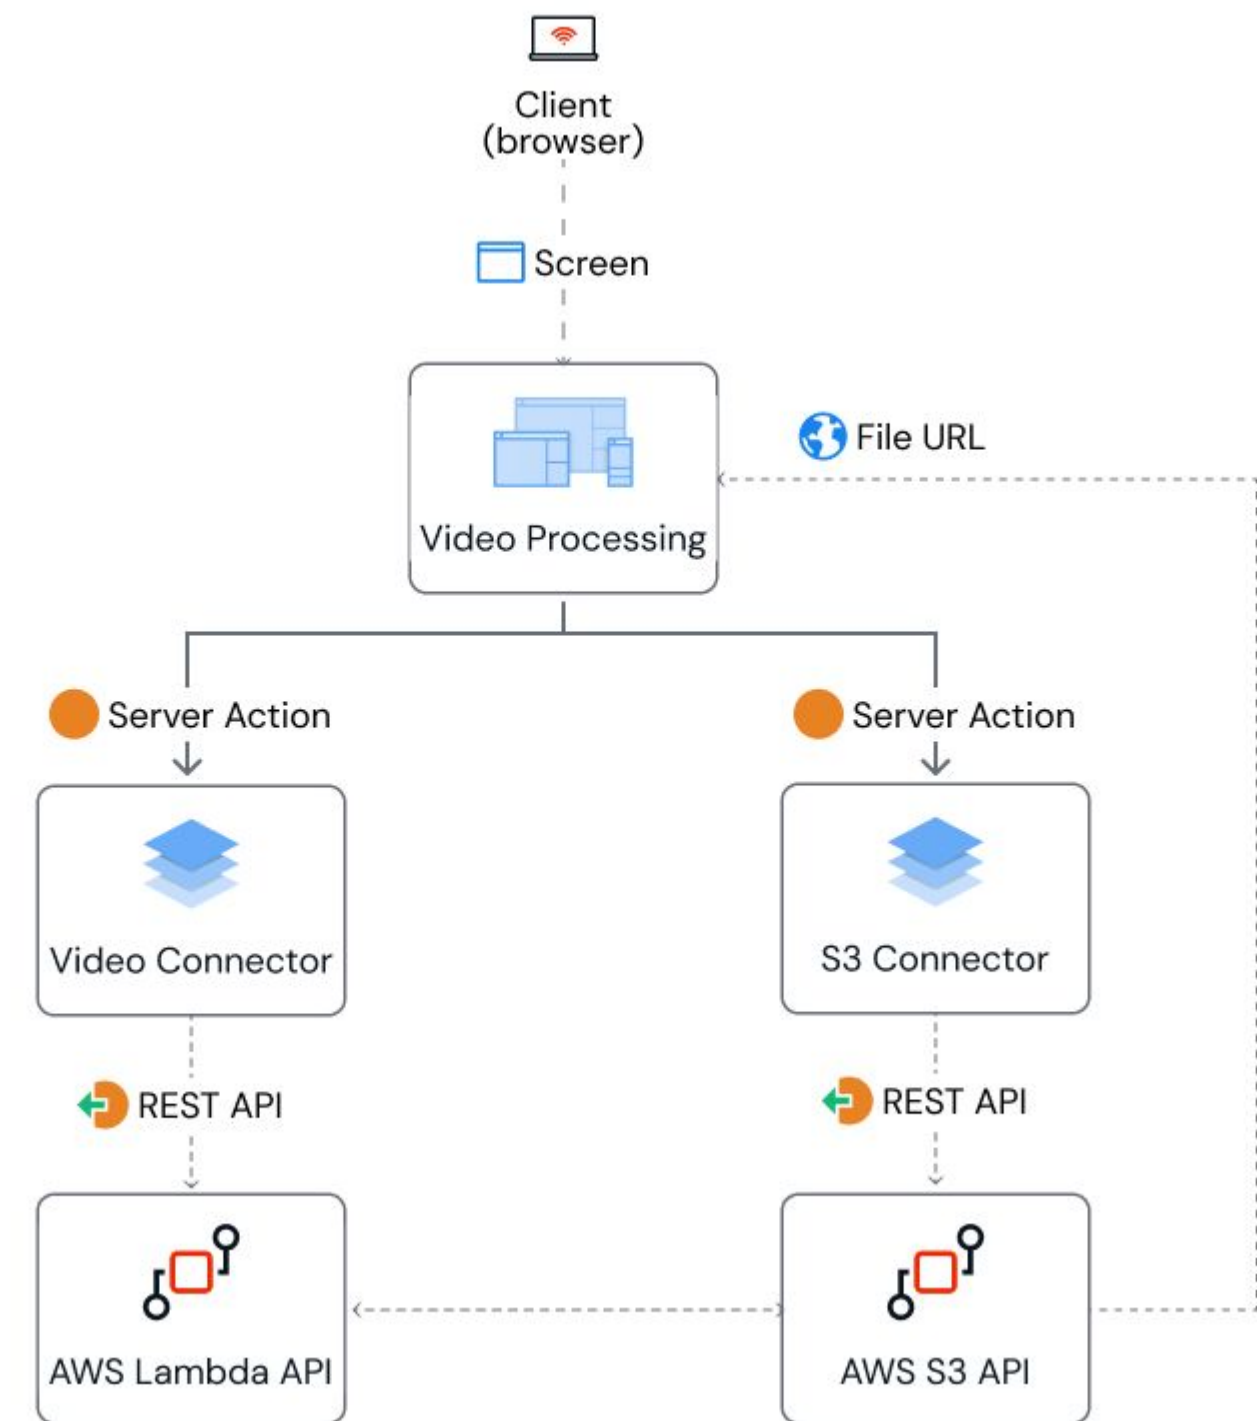

Integration with Traditional Code

- Video Processing: Using AWS to run traditional code
- Video connector Library to handle communication with the AWS Lambda API
- S3 Connector Library manages file storage and retrieval from S3

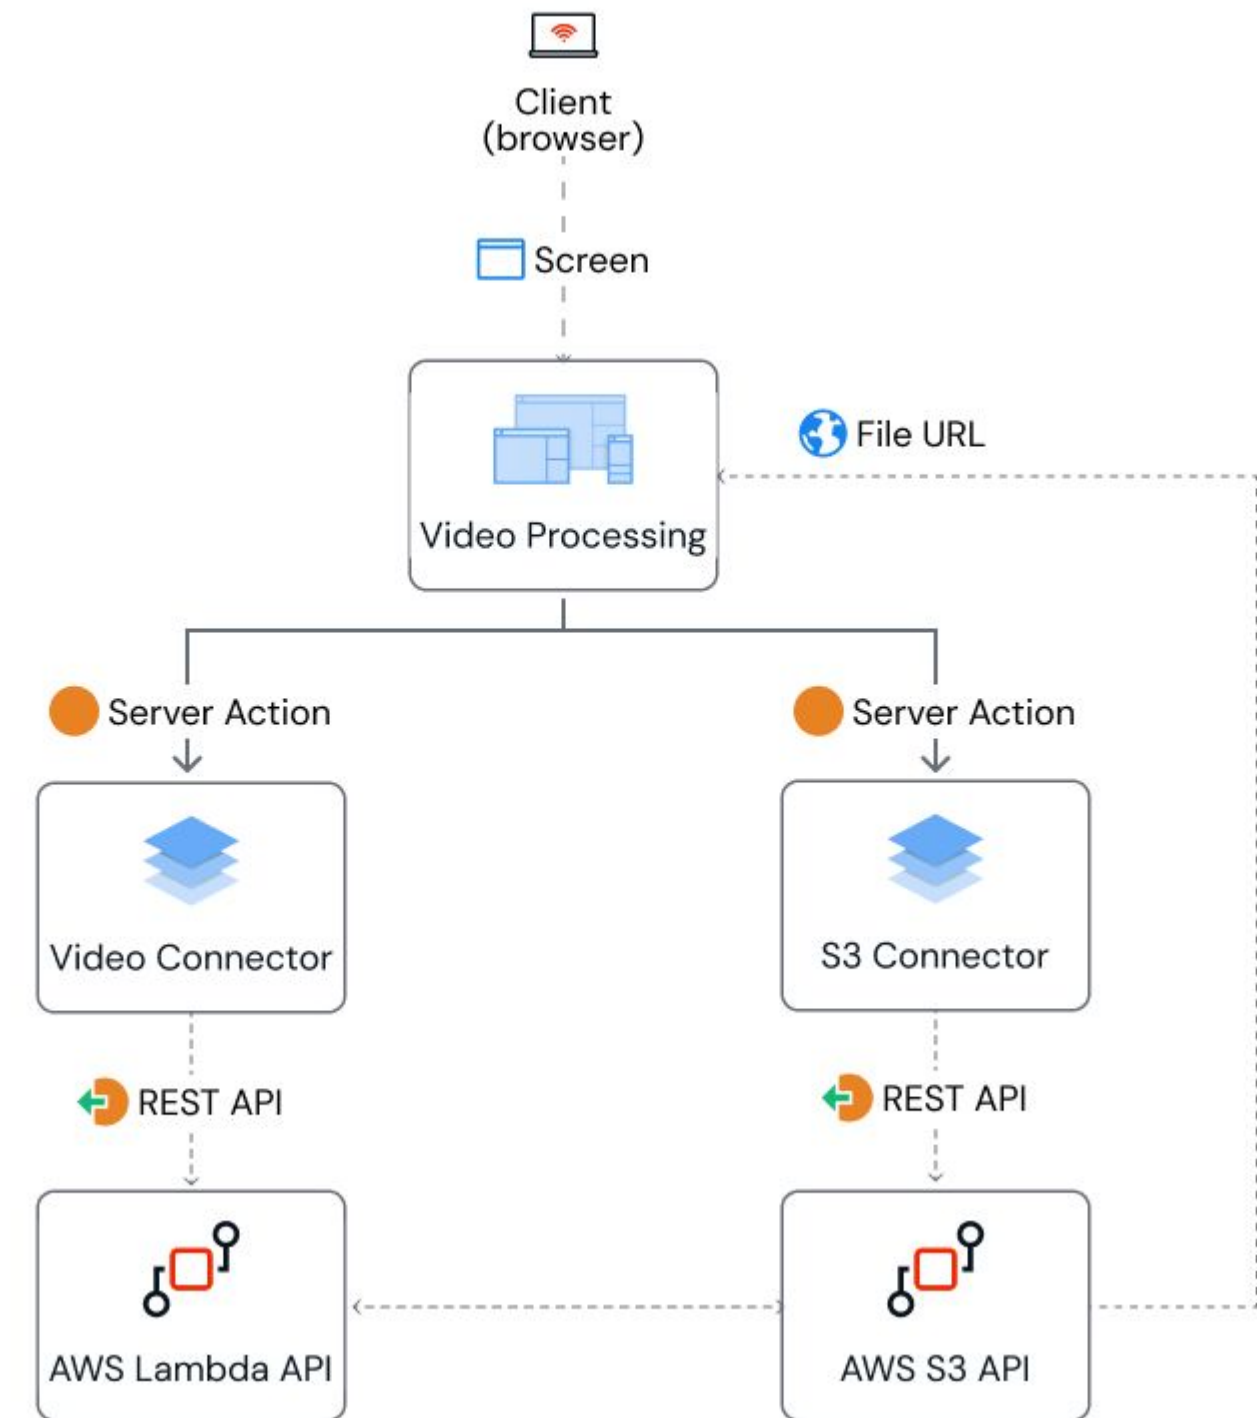

Integration with Traditional Code

- Video Processing: Using AWS to run traditional code
- Video connector Library to handle communication with the AWS Lambda API
- S3 Connector Library manages file storage and retrieval from S3
- File retrieved from S3 to show in the app or browser

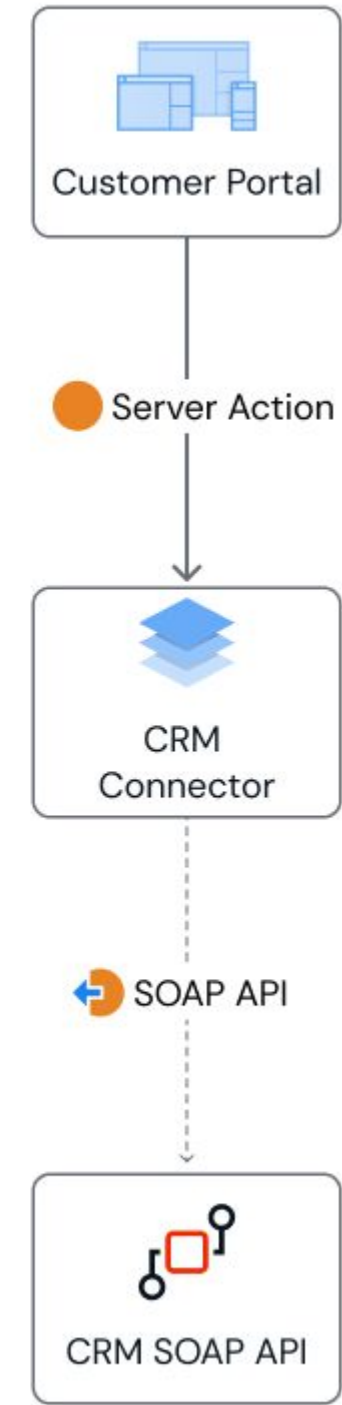

Integration with Traditional Code

- Video Processing: Using AWS to run traditional code
- Video connector Library to handle communication with the AWS Lambda API
- S3 Connector Library manages file storage and retrieval from S3
- File retrieved from S3 to show in the app or browser

Legacy Integrations

- Using external code to connect to legacy integrations
- Library with the traditional code that calls the SOAP endpoint

Legacy Integrations
