

ODC Architecture Exam Simulator

Final Review & Gap Analysis Based on Official Documentation and Training Material

Sources Reviewed

Official ODC Documentation:

- App Architecture
- Building a Well-Architected App
- Reuse Elements Across Apps
- Service Actions
- Libraries
- Event Driven Architecture
- Implement Events in ODC
- Properties of ODC Events
- Cloud Native Architecture

Official Training Material:

- Journey 957
- Official Quizzes
- Official Video Transcripts

Main Conclusion

The current simulator is generally aligned with the certification.

However, the official training material places significantly more emphasis on:

- Architecture design principles
- Reuse
- Ownership
- Decoupling
- Event-driven communication

than on infrastructure implementation details.

The simulator should evolve in that direction.

Questions That Should Be Reviewed

Infrastructure-Focused Questions

Review any question whose correct answer depends mainly on:

- Aurora
- EKS
- NATS
- Internal AWS implementation details

Reason:

Official material rarely focuses on those concepts.

Keep only questions explicitly supported by official documentation.

Questions That Should Be Added

Architecture Design Process

Question

What is the primary objective of the Disclose phase?

- A) Define deployment stages
- B) Identify business concepts and requirements ☒
- C) Create libraries
- D) Configure events

Documentation:

Building a Well Architected App

Question

What is the purpose of the Organize phase?

- A) Create applications
- B) Group concepts into bounded contexts with clear ownership and independent release cycles ☒

C) Configure integrations

D) Publish libraries

Documentation:

Building a Well Architected App

Question

What is the main goal of the Assemble phase?

A) Create environments

B) Transform bounded contexts into implementation components ☒

C) Create events

D) Configure monitoring

Documentation:

Building a Well Architected App

Libraries

Question

Why can't Libraries own Entities?

A) Libraries are stateless and cannot persist data ☒

B) Libraries cannot expose elements

C) Libraries cannot consume APIs

D) Libraries cannot be versioned

Documentation:

Libraries

Question

Where should highly reusable business-agnostic logic be implemented?

A) App

B) Library ☒

C) Workflow

D) Event

Documentation:

Libraries

Official Quiz

Question

Where should API keys and environment-specific configurations be stored?

A) Library

B) Application ☒

C) Event

D) Static Entity

Documentation:

Video Transcript

Service Actions

Question

What type of dependency is created when consuming a Service Action?

A) Strong Dependency

B) Weak Dependency ☒

C) Circular Dependency

D) Runtime Dependency

Documentation:

Service Actions

Question

Why does ODC recommend Service Actions?

- A) To increase coupling
- B) To support loosely coupled applications and independent deployments ☒
- C) To replace APIs
- D) To replace Libraries

Documentation:

Service Actions

Event Driven Architecture

Question

Which are benefits of Event-Driven Architecture?

Select all that apply.

- ☒ Asynchronous Communication
- ☒ Architecture Decoupling
- ☒ Tight Coupling
- ☒ Reduced Scalability

Documentation:

Official Quiz

Question

Which components are part of Event-Driven Architecture?

Select all that apply.

- ☒ Events

☒ Event Producers

☒ Event Consumers

☐ Centralized Database

☐ Synchronous Communication

Documentation:

Official Quiz

Question

Where can Event triggers be defined?

A) Any application

B) Only in the application where the Event is defined ☒

C) Dedicated Event application

D) Platform services

Documentation:

Official Quiz

Question

Where can Event handlers be defined?

A) Only in producer application

B) Any application that subscribes to the event ☒

C) Dedicated Event application

D) Platform services

Documentation:

Official Quiz

Event Properties

Question

What is the maximum payload size of an ODC Event?

- A) 1 KB
- B) 5 KB
- C) 10 KB ☒
- D) 100 KB

Documentation:

Properties of ODC Events

Question

How many retries are attempted after a failed Event execution?

- A) 3
- B) 5
- C) 10 ☒
- D) Unlimited

Documentation:

Properties of ODC Events

Question

What ordering guarantee exists for ODC Events?

- A) FIFO
- B) Delivery order guaranteed
- C) Delivery order not guaranteed ☒
- D) Reverse order

Documentation:

Question

What is the maximum execution time of an Event Handler?

- A) 30 seconds
- B) 1 minute
- C) 2 minutes ☒
- D) 5 minutes

Documentation:

Properties of ODC Events

Recommended Weight Distribution

Dependencies: 15%

Libraries: 15%

Event Driven Architecture: 20%

Service Actions: 10%

DOA (Disclose / Organize / Assemble): 15%

Reuse Elements Across Apps: 10%

App Architecture: 5%

Cloud Native Architecture: 5%

Agentic Apps: 3%

Data Fabric: 2%

Infrastructure Details: 0-5%

Final Recommendation

The simulator should evolve towards testing architecture decisions and design principles rather than platform implementation details.

The official training material strongly suggests that the certification evaluates understanding of:

- ownership
- bounded contexts
- reuse
- weak dependencies
- service actions
- events
- loose coupling

These topics should become the primary focus of future question additions.
